Understanding the complex dynamics of financial markets through microsimulation

Qiu, G.

Citation for published version (APA):
# Contents

1 Introduction 1
   1.1 Complexity of financial markets ................................. 1
      1.1.1 Financial markets as complex systems ....................... 1
      1.1.2 The complex dynamics of financial markets ................. 5
      1.2 Motivation and methodology .................................. 7

2 Empirical Observations and Limitations of Traditional Economic Theories 9
   2.1 Stylized facts observed in financial markets .................... 9
      2.1.1 Stock markets .................................................. 10
      2.1.2 Options markets ................................................. 13
   2.2 Empirically consistent models .................................... 18
      2.2.1 Models of price dynamics ..................................... 18
      2.2.2 Option pricing models ......................................... 19
   2.3 Problems of standard financial theories ......................... 25
      2.3.1 Adoption of unrealistic assumptions ........................ 26
      2.3.2 Evasion of endogenous mechanisms ........................... 29

3 Modern Approaches to Financial Modeling: Heterogeneity, Irrationality and Interactions 32
   3.1 Behavioral finance .................................................. 32
      3.1.1 Stock markets ................................................... 36
      3.1.2 Options markets ................................................ 36
   3.2 Agent-based simulation ............................................. 37
      3.2.1 Stock markets ................................................... 40
4 Understanding Stock Market Dynamics 49
4.1 A cellular automaton model of stock markets 50
4.1.1 Level I model 51
4.1.2 Level II model 52
4.1.3 Level III model 53
4.1.4 Rule of price updating 55
4.2 Simulation results 57
4.2.1 Simulation results of the Level I model 57
4.2.2 Simulation results of the Level II model 58
4.2.3 Simulation results of the level III model 58
4.3 Discussion: The market dynamics revealed by the model 63
4.3.1 Long-range interactions can emerge from local interactions 65
4.3.2 Price and volatility are mean-reverting 67
4.3.3 Heavy tails due to large price variations are caused by imitations 69
4.3.4 Volatility clustering is related to the evolution of trading activity 71
4.3.5 The regularity can be identified in some other microsimulation models 73
4.4 Conclusions 74

5 Why Do Options Markets Smile? 76
5.1 A microsimulation model of options markets 77
5.1.1 S model: The market consists of only speculators 78
5.1.2 SA model: The market consists of both speculators and arbitrageurs 79
5.1.3 SAL model: Difference in liquidity is included 80
5.2 Simulation results 81
5.2.1 Shapes of the implied volatility curves 81
5.2.1.1 Implied volatility curves from the S model 82
5.2.1.2 Implied volatility curves from the SA model 82
CONTENTS

7.2.2 Applications to practice ........................................... 112

A A detailed description of the options market model ............. 114
 A.1 The rule of option price updating ................................. 114
 A.2 The dynamic aspect of speculators’ behavior .................... 114
 A.3 The parameter values ................................................. 115

B Analytical solution for a special case of the options market model 118

C Levels of trading activity of different speculators............... 120

Bibliography ..................................................................... 132
Glossary ......................................................................... 133
Publications ..................................................................... 134
Summary ......................................................................... 135
Samenvatting .................................................................... 138
Acknowledgements ............................................................. 141
