The research reported in this thesis was carried out at the following institutions:

Department of Marine Ecology, Netherlands Institute for Sea Research (NIOZ). P.O. Box 59, 1790 AB Den Burg, The Netherlands.

Laboratory for Aquatic Microbiology, Institute for Biodiversity and Ecosystem Dynamics (IBED), University of Amsterdam. Nieuwe Achtergracht 127, 1018 WS Amsterdam, The Netherlands.

Caribbean Research and Management of Biodiversity (CARMABI) Foundation. Piscaderabaai z/n, P.O. Box 2090, Willemstad, Curaçao, Netherlands Antilles.

The investigations were supported by the Portuguese Science and Technology Foundation (FCT) through the PhD grant SFRH/BD/13382/2003.

*There is a primary cause for the
global degradation of coral reefs
and for the destruction of the last
pristine forests of our Earth...
An urge for resource depletion and
for using up beyond need, which is
based on the same greedy attitude
which leads to the exploitation of
humans by humans...
For this global problem, we need a
global solution!
I dedicate this thesis to everyone
who dreams the alternative and
“demands the impossible”, fighting
for freedom, social justice and for
the need to respect Nature and its
equilibrium, upon which in the end
we all depend.*
