# CONTENTS

### Preface

#### From Black Holes to Microstates

1. **Four Dimensional Black Holes**
   - 1.1 Black Holes in General Relativity
     - 1.1.1 Black Holes
     - 1.1.2 Killing Horizons and Surface Gravity
   - 1.2 The Laws of Black Hole Mechanics
     - 1.2.1 Kumar Integrals
     - 1.2.2 Black Hole Laws
   - 1.3 Black Holes as Thermodynamical Objects
     - 1.3.1 A Free Scalar Field and Bogoliubov Transformations
     - 1.3.2 Hawking Radiation
   - 1.4 Consequences of the Black Hole Radiation
     - 1.4.1 Black Hole Evaporation and Information Loss
     - 1.4.2 Gravity as an Effective Description

2. **The Fuzzball Machinery**
   - 2.1 Black Holes of Interest to Us
     - 2.1.1 BPS-ness, Linearity and AdS/CFT
     - 2.1.2 Beyond AdS/CFT?
     - 2.1.3 The Guinea Pigs
   - 2.2 Black Hole Ensemble
     - 2.2.1 The No-Hair Theorem, Entropy and Geometry
     - 2.2.2 At Which Level Can we Trust Our geometries
   - 2.3 Phase Space Quantization
     - 2.3.1 Solution Space, Phase Space and the Symplectic Form
     - 2.3.2 Quantization
Contents

2.4 Coarse Graining ........................................ 43
  2.4.1 Coarse Graining as an Average .................... 43
  2.4.2 Another Possibility: Typical States ............... 44

II D1-D5 System and Coarse Graining 45

3 The Lunin-Mathur (LM) Geometries 49
  3.1 The Five Dimensional “Small” Black Hole ............ 49
    3.1.1 The Set-Up ..................................... 50
    3.1.2 The Geometry .................................. 50
  3.2 The Lunin-Mathur (LM) Geometries .................... 52
    3.2.1 Switching to the FP System ...................... 52
    3.2.2 The LM Geometries .............................. 52
  3.3 The Symplectic Form and Quantization ................. 53
    3.3.1 The Symplectic Form ............................ 54
    3.3.2 Quantization .................................. 55

4 Simple Ensembles and Their Coarse Graining 57
  4.1 Interlude: Phase Space Densities ..................... 58
    4.1.1 Why Phase Space Densities? ...................... 58
    4.1.2 Wigner vs Husimi Distribution ................... 59
  4.2 Mapping States to Geometries ........................ 61
    4.2.1 From States to Geometries ....................... 61
    4.2.2 Avoiding Red Traffic Lights ..................... 63
  4.3 A First Look at Thermodynamical Ensembles .......... 69
  4.4 The Survival of the No-Hair Theorem ................. 71
  4.5 Thermal Ensembles and Condensation ................. 73
  4.6 The “Small” Black Ring ................................ 76
    4.6.1 Describing the “Condensate” Ensemble ............ 76
    4.6.2 The Small Black Ring Effective Geometry ......... 77
    4.6.3 Avoiding the No-Hair Theorem .................... 78
  4.7 The Conical Defect Metric ........................... 79

III Towards Macroscopic Black Holes in the Fuzzball Realm 83

5 Black Constellations in Four Dimensions 87
  5.1 From Ten to Four Dimensions ........................ 88
    5.1.1 Walking the Path of Reduction ................... 88
    5.1.2 The Special Kähler Geometry .................... 90
  5.2 Spherical Symmetry and Attractor Flow ................ 93
## Contents

5.2.1 Supersymmetry and Attractor Flow .......................... 93
5.2.2 The One Centered Black Hole ................................. 95
5.3 Bubbles and Bound Black Holes ................................. 97
  5.3.1 More than One Center ...................................... 97
  5.3.2 Useful Properties ......................................... 98
5.4 BPS States Counting .............................................. 100
  5.4.1 The Family Tree ........................................... 100
  5.4.2 Missing States: Wall Crossing ............................ 102

6 Setting the Stage for Fuzzballs ................................. 105
  6.1 From the Symplectic Form to Quantization ................. 106
    6.1.1 Open Strings and Symplectic Form .................... 108
    6.1.2 Kähler Geometry and Geometric Quantization .......... 110
  6.2 Quantization at Work ......................................... 114
    6.2.1 Behind the Scene: Toric Kähler Manifolds ............ 115
    6.2.2 Inviting Fermions to the Party ....................... 119
    6.2.3 Treasure Hunt: Degeneracy ............................ 120
  6.3 Simple Bound Black Hole Systems ........................... 121
    6.3.1 The Two-Center Case .................................. 122
    6.3.2 The Three-Center Case ................................. 123
    6.3.3 Comparison to the Split Attractor Flow Picture ...... 129
  6.4 Dipole Halos .................................................. 131
    6.4.1 Meet the Dipole Halo .................................. 132
    6.4.2 Degeneracy Using Attractor Tree ..................... 135
    6.4.3 Degeneracy Using Toric Techniques ................... 137
  6.5 Scaling Solutions and Fuzzballs ............................ 140
    6.5.1 D6-D6-D0 Crush and its Quantization ................. 141
    6.5.2 Not Enough States ..................................... 142
    6.5.3 Beyond Supergravity? ................................. 143
  6.6 Large Scale Quantum Effects ................................ 145

IV Conclusion and Discussion ........................................ 149

7 Conclusions ......................................................... 151
  7.1 So Far so Good ............................................... 151
  7.2 Looking to the Future ....................................... 153

V Appendices .......................................................... 155

A Squeezed States and Negative Energy Density ............... 157
