You will be contacted as soon as possible.
6 Optimal use of paired proteomics data .............................. 71
   6.1 Introduction ..................................................... 72
   6.2 Data set ......................................................... 73
   6.3 Data analysis ................................................... 75
   6.4 Results .......................................................... 78
   6.5 Conclusions ..................................................... 79

7 Enhancing classification performance: covariance matters .......... 81
   7.1 Introduction ..................................................... 82
   7.2 Data set ........................................................ 82
   7.3 Classification methods: PCDA, SVM, SIMCA .................. 83
   7.4 Results .......................................................... 84
   7.5 Conclusions ..................................................... 92

Outlook ........................................................................ 93

Bibliography .................................................................. 95

Publications ............................................................... 105

Summary ....................................................................... 107

Samenvatting .................................................................. 111

Dankwoord .................................................................... 115
