## ACKNOWLEDGMENTS

‘*gīt abong ia di līk bi*’. This Gbigbil proverb, which literally means ‘the elbow never disregards the back’, denotes a sense of connection, support, and reciprocity that is so important in the Eastern Cameroonian village where I did research. Used as it is to remind people of their indebtedness to the pillars and social networks supporting their personal projects, it is also applicable to me now that I have finished the long and collaborative project that my Ph.D. trajectory has been. Indeed, many people have served as that back that kept my elbow writing, and without them this thesis would never have been accomplished. In order not to disregard them but rather, in line with the proverb, give them the honour that they deserve, I would like to explicitly acknowledge the indispensable contribution and support of several groups of people.

In the first place, I would like to express my gratitude to all my informants who are mentioned in this thesis, though under the guise of pseudonyms. Until today, I am impressed by the openness, trust, and readiness to help with which you have received me and tried to enrich my understandings; *osoko boulá!* I hope this thesis, along with your children to whom you have given my name, will keep our close connection alive. In a similar vein, I would like to thank the personnel of the health centres in Asung and its surroundings, as well as informal health practitioners in the region and the missionary clergy in Kamandjom, for their willingness to involve me in their activities. You allowed me to witness and discuss matters that should normally remain unseen or untold. Many thanks also to all other inhabitants of Asung and the surrounding villages, who always welcomed me with great hospitality and made my stay, as well as the visit of my mother and friend, into unforgettable experiences. I am particularly beholden to Baktala Patrice, Mekindawape Sother, Ebanga Frédéric, and the *chef du village* for providing me with access to the site and its wonderful inhabitants.

In the Netherlands, I am deeply indebted to my three supervisors Anita Hardon, Peter Geschiere, and Catrien Notermans, who would not only give me ample opportunity to create my own thoughts and insights, but also stimulate me to go beyond my initial analysis and think about broader implications of this research. Our meetings were always inspiring and encouraging to me – not least because the combination of different expertises made for a great team. Anita, I would like to thank you for your sharp observations and the guiding reflections on the broader lines and arguments of this research. Your enthusiasm about the essence of my work would get me back on track whenever I felt disoriented or lost. Peter, your historical and regional knowledge of

Cameroon allowed for detailed discussions and comparisons, which put my material and conclusions in perspective, and taught me the value of minute observations and analysis. Catrien, from the very moment I developed my initial research ideas, you have been following me as a dedicated ‘academic mother’ who shared my passion for Cameroon; you encouraged me to do a Ph.D. when I thought I couldn’t do it, you listened endlessly to my insecurities or overenthusiastic ideas, and you would, like a mother, sit with me and your three lovely children around the lunch table in your house before discussing my work in progress and lingering over our mutual memories of Cameroon. Thank you all for the intellectual input as well as the moral support that kept me going in prosperous and more problematic times.

Academic exchanges with experts on the subject matter were, however, not restricted to the Netherlands; I learned a lot from discussions with the Cameroonian sociologists and anthropologists Honouré Mimché, Antoine Socpa, Paul Nkwi, Flavien Ndonko, and Solange Yegba. My long-term collaboration with demographers at the *Institut de Formation et de Recherche Démographiques* (IFORD) has been extremely helpful and inspiring to me. I am especially grateful to Dr. Jean Wakam who set up this collaborative arrangement, and Dr. Gervais Beninguissé who, with endless enthusiasm and interest, discussed relevant research questions with me and translated them into a sound demographic survey that I would never have been able to compose myself. An excellent statistical analysis and interpretation of the gathered survey data were subsequently offered to me by demographer Nadège Kouam and her assistant J.P. Batioba. The technical help of computer expert Wabo Abraham, the access to and guidance through the library assured by Awung Frankline and Kedi Michel respectively, and the trips to and from the institute by *chauffeur* Mbock Simon, made my stay at IFORD one of great convenience and support.

My collaboration with the Ministry of Public Health in Yaoundé, and its Provincial Delegation in Bertoua, was equally fruitful and instructive. Not only did our discussions offer me insight into the perspectives of Cameroonian biomedical experts, but I also learned a lot from all research reports and documents in the archives of the Ministry that were made available to me. I would like to thank in particular the three provincial delegates with whom I worked in Bertoua, Dr. Doaw Menkanda Jean Blaise, Dr. Roger Belinga Banga, and Dr. Nsom Mba Charles. The *chef du district* Dr. Tedjouka, as well as Dr. Njiki Dounou Rostand and Dr. Anjembe from the *Sous-Programme Santé de la Reproduction* provided me with useful statistics regarding the health area of Asung and reproductive health issues respectively.

Several other institutes provided me with access to sources and information that I would probably never have found elsewhere. I am grateful for the permission to search for, and copy, relevant documents in the National Archives and the libraries of the Ministry of Scientific Research and Innovation, the *Institut de Recherche pour le Développement* (IRD), the *Institut pour la Recherche, le Développement Socio-économique*

*et la Communication* (IRESCO), the University of Yaoundé I, the Catholic University of Central Africa (UCAC), and the municipality of Bélabo. Quite to my surprise, I found many written and (first-hand) oral histories on Eastern Cameroon in the beautiful fortress of the Fathers of the Holy Ghost (Paters van de Heilige Geest) in Gemert, the Netherlands. Especially Father Martin van Moorsel, so at home in the Gbigbil area, and Father Martin Wilson, so at home in the congregation's archives, were of great help during the preparatory phase of this research. I would also like to thank the Dutch 'Monseigneur van Heijgen' and 'Frère Martin' in Bertoua and Diang for elaborating upon this historical information and sharing their personal experiences with me.

Further relevant documents, brochures, and information were generously given in meetings with staff of several NGOs that are currently working in the domain of reproductive and sexual health in Cameroon. While I would like to thank the representatives of the UNFPA, CAMNAFAW, FESADE, and AFVD in Yaoundé for giving me insight into their aims and contributions to (inter)national reproductive health objectives, I am indebted to my collaborators at PLAN, ASAD, and the *Centre de la Promotion de la Femme et la Famille* in Bertoua for offering me knowledge and indicators of health-related problems and existing interventions in the East Province of Cameroon. Special acknowledgment goes to PLAN employees Jacques and Esther, who did their best to provide me with the most up-to-date statistics with regard to mother and child health in Asung.

Specific insight into the incidence of pregnancy interruptions in the region, as well as the role of biomedical care in women's health-seeking itinerary, could only be gained through access to the numerous hospital records that I was allowed to examine. I was lucky that, despite the incompleteness and privacy of these registers, the staff of health centres in Asung, Bélabo, Mokolo I, and the Provincial Hospital in Bertoua were always willing to offer me access to these data and help to digest them. I thank in particular Dr. Hamalamo Zaoro, Dr. Mvondo Severin, Dr. Meli Hervé, madame Moussa, Dr. Lono Serge, and the gynaecologists Dr. N'ngang Guy-Michel, Dr. Adamo Bongoe, and Dr. Nguelé for their kind cooperation and patience while manually checking the registers with me.

A similar readiness and persistence to help was encountered in the courthouse in Bertoua, where I searched in vain for cases of convicted induced abortion. Thanks to President Moïse Kotcholi, Magistrate Ngnie Kamdemga Bertin, and Chief Actuary Louis Elouma Nke, the enormous and rather disorganized piles of court cases were ransacked for matters related to pregnancy interruption. I am happy that Judges Mr. Bugue Joseph and Mr. Louis Tenzong were willing to provide me with a better understanding of Cameroonian law and jurisprudence before I delved into this complicated issue.

Learning the local Gbigbil language was challenging for me, because the language had never been documented. I would like to thank Teresa Heath at the Summer Institute of Linguistics (SIL) in Yaoundé for explaining some general linguistic patterns to me and providing me with access to the rich SIL library. It was great to hear that, some time after

I left the field, she invited my Gbigbil friends, who had expressed a wish to be assisted in their attempts to document their language, to participate in a translation training course of the institute.

The process of collecting and making sense of all these data has been funded by the Amsterdam Institute for Social Science Research (AISSR). I am grateful for this opportunity, as well as for their funding for a demographic summer school in Louvain-la-Neuve in Belgium and several international conferences and workshops that allowed me to deepen my understanding and disseminate my findings. A special thanks to Hermance Mettrop, José Komen, Yomi van der Veen, Teun Bijvoet, Anneke Dammers, Miriam May, Nicole Schulp, and Michiel Baas for their administrative and practical support. I am also indebted to Janus Oomen, who took the effort to go through my endless reference list and restore my crashed Endnote database that proved of great use during the writing phase. At the very end of this writing process, Zoe Goldstein, David Hymans, and Malissa Shaw were willing to edit different parts of the final version of this thesis – for which I would like to thank them.

The AISSR also offered me an enjoyable and stimulating working environment. Many colleagues have become good friends in the process. I am particularly grateful for the friendship of Heidi Sauls, Papreen Nahar, Amalinda Savirani, Marie Lindegaard-Rosenkrantz, Tjerk-Jan Schuitmaker, Jasper Blom, ‘Mafe’ Olarte Sierra, Mihai Varga, Benno Netelenbos, Daniel Reijer, Sylvia Tidey, Marcel van den Haak, Victor Toom, Josip Kesic, and Rosalijn Both. It was nice to share an office with Silke Heumann, and to have the office (and welcome distraction) of Amalinda Savirani, Benno Netelenbos, and Sasha Ramdas next to mine. The company of Rosalijn Both, Fuusje de Graaff, Josien de Klerk, and Christopher Pell in my office in the Spinhuis definitely helped me through the last, and rather stressful, period of this Ph.D. trajectory. My relationship with staff members of the University of Amsterdam has also always been good and inspiring to me. I am glad to acknowledge that my personal relationships with especially Trudie Gerrits, Ria Reis, Sjaak van der Geest, and Winny Koster have moved beyond the sphere of mere academic interaction.

The many discussion and writing groups that were created within this setting have greatly contributed to the development of my ideas. Sharing my research ideas and proposals before going to the field with Heidi Sauls, Maria Elena Planas-Toledo, Maria Fernanda Olarte Sierra, Huong Nguyen, Benjamin Kwansa, Jonathan Dapaah, Sjaak van der Geest, and ‘shadow’ Trudie Gerrits in our ‘pre-fielder’ group gave me inspiration and insights that were indispensable during this creative research phase. The discussions with Daniël Reijer, Janneke Verheijen, Marieke van Eijck, Fuusje de Graaff, Ellen Blommaert, Benjamin Kwansa, Jonathan Dapaah, Agnes Kotoh, Sasha Ramdas, and Eline van Haastrecht in our ‘post-fieldwork writing group’ gave me welcome distraction and direction in the rather lonely and messy writing phase after fieldwork. The regular discussions of works in progress – of myself and other Ph.D. researchers – in our

programme group 'Health, Care and the Body' had a similar stimulating effect. I am grateful to all those who took time to read and reflect upon my work, even if they faced limits in time or in direct academic or affective connection to the topic.

Affective connection to the topic was clearly there for me; this research has undoubtedly left its emotional traces on me. Never did the stories and realities of loss in Asung leave me untouched. It was very helpful to share some of the most disconcerting emotional challenges with Marion van Schaik, Ina de Jong, and Harry van Sleen. Further, Ria Reis, Michiel Baas, Marianne Vysma, Marie Lindegaard-Rosenkrantz, Maria Fernanda Olarte Sierra, and Malini Sur encouraged me to express, and make sense of, my worries and concerns during more informal gatherings. I am grateful for their efforts to help me give meaning and direction to what have become some of the most important experiences in my life.

Lastly, but with greatest affection, I would like to express my deep gratitude to those who are most dear to me in life and supported me throughout the whole process. My friends Jolanda, Fieke, Liesbeth, Marieke, and Stefan showed their commitment and endless patience by sharing fears and tears before each and every departure to the field, by listening to my elaborate stories after every return, and by commenting on my written or spoken thoughts about this research over many cups of tea. I am very proud of my father who, almost against his nature, undertook an adventurous trip to Cameroon in order to explore the world that is so meaningful to his eldest daughter. That you chose to give our dog the name of my research site, dad, is not only very much appreciated by my Gbigbil informants, but also shows me how much my passions and interests are central to you as a committed father. I feel emotionally indebted to my mother, for now that I have come to understand, and was forced to think of, what it is to 'lose' a child, I can only begin to imagine what worries and sadness my absence must have induced in her. Thanks, mum, for also reading all my draft chapters and bringing me back to common sense and reality whenever academic discussions removed me too far from the world I wanted to describe. Kristel, little sis, even if you always reminded me of how different my interests and activities were from your own occupations in life, you managed to make me feel understood, respected, and appreciated whenever our different life trajectories brought us together. I could never have finished this project without the support, love, enthusiasm, and endless optimistic encouragement that I received from all three of you. My final thanks and love go to Alex, *dragul meu*, who has been present and supportive during my entire Ph.D. trajectory, but became particularly important to me towards the end of the process. Your appearance in my life has not only given me the final strength to finish this dissertation, but has also opened up promising pathways into, and projects for, the future.
