# Acknowledgements

It is one of my best virtues, I believe, to work with people who are very good at their job. This was the case with the CeNDEF group and the Tinbergen Institute, which in different times and ways were the house of my doctoral experience. Beside this, I had the opportunity to write my own research project, which often put me in the need of help and advice on various issues. As a consequence, I feel indebted to a large number of people. The most important figures are my two supervisors, prof. Cars Hommes and prof. Jeroen van den Bergh. Their joint supervision was very balanced and complementary. Jeroen introduced me to economics research, starting already in the time of my Tinbergen MPhil. Cars hosted me in CeNDEF, trusting me and my quite exotic research project. Although one can trace Cars' and Jeroen's hand in the different chapters of my thesis, I often benefited from their double feedback.

I am thankful to the members of my thesis committee, and not just because they accepted to read the manuscript: I had several useful discussions with them over the last three years. First of all prof. Koen Frenken, whom I met at a summer school in late 2008. Starting from comments and advise on my early work, Koen has followed quite closely the development of my thesis. I am particularly thankful to Koen because comments and advise became an invitation to become his co-author and then in the opportunity to engage in post-doctoral work on the complexity and dynamics of technological change. I am indebted to Prof. Luigi Marengo, for comments and suggestions on early versions of my work in this thesis. Jan Tuinstra gave me guidance and supervision during the initial

stage of chapter 3: the idea of this chapter was conceived during his course in Bounded Rationality. Similarly I am thankful to Adriaan Soetevent: chapter 5 started as a research proposal written for his course in Social Interactions. I am thankful to Cees Diks, finally, who provided an extensive and detailed feedback on the thesis.

The Tinbergen MPhil program thought me the fundamentals of economics. CeNDEF has pursued this educational path, with its focus on non-linear economics, and resulted an ideal habitat for someone like me coming from physics and finance. In one way or another, all members of this group have taught me something, or helped on various issues: Daan, Domenico, Florian, Pim, Marco, Marius, Maurice, Misha, Roald, Saeed, Tatiana, Te. A special thank to Daan, for translating the summary of my thesis in Dutch, to Tatiana, for her guidance in the final stage of the thesis, and to Te, my office mate in the last two years. Visitors to which I am grateful for friendship and help are Jacob, Mei and Yao. Beside teaching me things, CeNDEF people always provided with interesting opportunities for discussion, usually in the coffee room. Topics could range from football champions league to the Harsanyi purification theorem. Roald, Marius and Pim were particularly active in this sense. I am happy to have been the teaching assistant of Roald and Maurice for their game theory courses: I believe I learned a lot from them. I also thank Andries, Ida and Kees from the secretarial office of the Quantitative Economics department.

There are other people outside CeNDEF that have been important during my PhD. In particular Volker, who has helped me on several occasions with Matlab and LaTeX, beside being my flatmate and friend. Other important friends in Amsterdam are Zoltan, Karolina, Julian. I want also to mention former colleagues in the Tinbergen MPhil program, who shared with me the intense experience of courses and exams: Jona, Lukasz, Marcelo, Marloes, Matija, Melinda, Michal, Pawel, Petr, Robert, Thomas.

Finally, I want to thank my parents, who have taught me to love knowledge and hard work, and Simona, who is actually the responsible for the big turn in my life that transformed me from a financial trader into (maybe) an economist.
