Since publication of our article [1], we have realised that the legend of Figure one needs to be corrected and should read as follows:

“Photomicrograph of Gc-5s pg and Gc-6s pg stained with an anti-activated caspase 3 antibody and counter-stained with Haemaluin as described in Materials and Methods. A, Gc-5s pg culture treated with 200 uM CAP for 24 h. B, Gc-6s pg culture treated with 250 uM CAP during 48 h.”

We apologise for any confusion this may have caused.
