Acknowledgements

After five years of work on this thesis, it is time to thank the persons without whom this work would have been impossible, or at least more difficult.

First of all Hans van der Weel, who introduced me to working in the University as a ‘student-assistent’. He was the best recommendation I could have had. Without him, I would probably not even have started as an Assistant Researcher.

The N.W.O.-project ‘Structural Equation Modelling of Panel Data in Economic Surveys’ was supervised by three professors in different fields of research. My first steps as an Assistant Researcher were guided by Heinz Neudecker in the Department of Actuarial Science and Econometrics (now called the Department of Quantitative Economics). The lectures Econometrics in which I assisted him taught me (again) all of econometrics that I know. Although my research was rather solitary, the other members of the department, and especially Margo and Arnold, with their attention and help, provided a warm environment.

Part of the research was carried out in and supervised from Barcelona. Albert Satorra, of the Facultat de Ciències Econòmiques i Empresarials of the Universitat Pompeu Fabra, helped me through some very fundamental steps. His influence on this dissertation is more than could be expected from the two months I was a visitor in his department. Among the persons that taught me how to deal with Spanish keyboards and how to order un entrepà amb formatge i pernil in Catalan grocery stores are Jan Graffelman and Nuria Satorra. They were the only persons in Barcelona I was able to speak Dutch or dance the salsa with.

Germà Coenders helped me a lot, both during my stays in Barcelona, and during his stays in Amsterdam. Without his experience with LISREL my Appendices would not have been complete. Yet, he could not convince me that Catalans are not interested in food.
During the research, the supervision shifted more and more towards my promotor, Willem Saris, especially after his return from TelePanel to the Department of Statistics and Methodology. Discussing the route of a purchase from the shelves in the supermarket into the questionnaire of TelePanel was very clarifying. The fact that he is very demanding with respect to the quality of research is largely compensated by his patience and inspiration. Finishing this dissertation hardly would have been possible without him. Assistance during my stay at Willem’s office was given by Hermance, and later by Marianne.

The data used throughout this thesis were collected by the Stichting TelePanel. Edwin van den Oord helped me in using and understanding all of the 32 Megabytes, and the phenomena contained in them.

I am grateful to Prof. dr. R.J. Mokken and the other members of the promotion-committee are thanked for reading and judging the manuscript. Furthermore, anonymous referees are thanked for their comments on previous drafts of some chapters.

Although the society for PhD-students ‘Apollo’ did not get to make skiing-trips with PhD-students, our meetings in ‘De Jaren’ (and especially the hours afterwards) were very relaxing. We had to conclude that the stereotype of a PhD-student, concentrating on his own subject and nothing else, is true, but Apollo prevented me from becoming one myself.

Frits Stuurman corrected the English in this dissertation. His enthusiasm even in correcting the formulas and LISREL-appendices prevented the last straws from breaking the camel’s back. Any mistakes in the language still remaining, I must have made after he finished his job.

I hope that reading the summary in Dutch will give my family an idea of what on earth I have been doing during the past five years. Nonetheless their help came on many occasions, and was used in various ways.

I also thank my paranimfen Annemie and Marco, whose job was more than sitting by me and being quiet. Before that in their turns they each had their parts.

The final paragraph of these acknowledgements – the last one I write for this thesis – is devoted to Monique: she supported me in starting with this research, and, helped by the fact that she had to live in an archive for almost a year, coached me in finishing it. She was almost as satisfied as I when I finished this dissertation.

Amsterdam, Tuesday 13 April 1999
