The past four years have been a thoroughly rewarding, learning experience, and I would not have made it without the guidance and support of quite a few people to whom I wish to thank. First and foremost, I would like to thank both my mentors: Prof. Dr. Wytse J. Wadman, and Prof. Dr. Tallie Z. Baram. I feel extremely fortunate to have had two such committed mentors, who have done their utmost to promote my scientific development. Wytse, your ongoing support and trust in my work were invaluable to me. You let me develop my scientific interests and aims using “my own motor” (as you say), but you were also there in times of need for good advice or direction (including during crazy night hours, be it via skype, email or what have you)... I feel privileged to have had you as a mentor. Dr. Baram, thank you so much for your insight, all those exciting discussions, and your uncompromising support during the past 4 years. Also thank you for exposing me to the scientific world by encouraging me to meet with fellow scientists and collaborators, and by sending me to professional conferences to present our work and discuss it. It is difficult to overstate the influence you had over my growth as a scientist, and I deeply appreciate it. I look forward to future, fierce (yet fun!) debates...

Quite a few people from the Baram and the Wadman labs have contributed to the work in this thesis. Dr. Yuncai Chen, it was a true pleasure to work with you; I have learned a great deal from watching you work. Qinqin Zha and Rui-Lin Wu: your contribution to our work was precious, thank you for all those long hours. Markus, aside of your expert virus work, I enjoyed our lengthy discussions at Peet’s/ Starbucks; you have shown me a different perspective on how to combine science and other parts of life. Shawn: thanks for both your contribution and for being such a good roommate. Lise, it was great working side by side with you, and I learned immensely from our work together; thank you for your endless patience and for all the wonderful work that facilitated our research. Willemieke and Paul – I enjoyed working with you, and I truly learned a lot through our interactions (hope you feel the same...). Sharib, Indra and Maryjane: Thank you for your dedicated work, and good luck in your future paths.

Collaborators and members of other research groups have enriched my scientific view and made a significant contribution to the work and ideas presented in this thesis. I am greatly indebted to Dr. Dane Chetkovich and his team members, Dr. Lewis and Dr. Han, for fruitful work together. I would also like to thank Dr. Bina Santoro for her insightful comments and discussions, as well for the GFP-tagged constructs. Dr. Erik Manders and Ronald Breedijk from the center of advanced microscopy at the UvA: thank you for providing an endless source of knowledge and expertise on imaging, and for facilitating the TIRF work.

Many other people inspired, helped, or were simply fun to be around in these past four years. Hans, you were my first mentor in the Netherlands and ever since, I could always rely on you
Acknowledgments

for a good advice; thank you for your support and wisdom. To all other (past and present) members of the Wadman group, including Erwin, Fleur (to who I am eternally grateful for an excellent paranimf work), Femke, Jan, Laura, Linda, Luuk, Marlies, Natalie, Pascal, Qiluan, Taco, Xin: thank you for the fun working environment; I still find it amazing that despite the diabolic open-space design of our building, we all get along so nicely together. Els, thank you for always willing to help out and for keeping my Dutch language active. As for people from the other side of the ocean: Celine, thank you for your friendship and for being such a great help. Amy: your thorough introduction to Irvine life made a very soft landing; Mankin: thanks for all those cigarette breaks (even though I don’t smoke) and discussions; Sicco, if science doesn’t work out, never forget that you can always have an alternative career as a translator (thanks!). And of course - Aniko … Korosi, what can I say? You were the best partner for ‘machine walks’ and coffee talks. It was great to have you around at both sides of the ocean, and I am sure our paths will cross again; Also, huge thanks for all your paranimf-related efforts. To all other members of the Baram group (past and present) whom I failed to mention: it was a great pleasure to be around such a special collection of people, providing both fun and stimulating atmosphere.

Approaching the end of this book, I would like to thank members of my family for their love and support through the years. To my parents, siblings and grandparents in Israel: keeping long-distance ties was not always simple, so ‘Toda’ for understanding and for remaining an important part of my life. Henk and Ineke – I am grateful for your continuous care, acceptance and help, including all those precious Fridays with Adam. Your constant effort in trying to make our lives somewhat more manageable through the course of our PhD studies means a lot to me. Joke, thank you for all your support and for keeping a quiet space for me when it was so much needed, and Bas – for pitching in during the epic move from Amsterdam to Meppel… Adam, you are too young to read this, and you probably have no idea yet what you mean to me (or perhaps you are just starting to discover), but in any case – thank you for being my guru, teaching me important lessons on altruism.

Finally, my dear Kris. Life with you in the past 11 years has been nothing but exciting, rewarding, and meaningful. I couldn’t have asked for more. Thank you for taking part in shaping who I am; thank you for the listening ear, and for your endless support, patience and love. Above all, thank you for making this journey worthwhile.
