You will be contacted as soon as possible.

Contents

Acknowledgements	xi
Preface	xv
1 Introduction	1
1.1 Measurement in Psychology	1
1.2 Admissible Statistics	3
1.3 Representational Measurement Theory	4
1.4 Latent Variable Models	5
1.5 Overview	7
2 A Reanalysis of Lord's Statistical Treatment of Football Numbers	11
2.1 Admissible Statistics	12
2.2 The Treatment of Football Numbers	15
2.3 Vending Machine Bias	19

2.4	Conclusion	24
3	The Rasch Model as Additive Conjoint Measurement	29
3.1	Measurement Levels and Admissible Statistics	30
3.2	Representational Measurement Theory	32
3.3	Assumptions of Latent Variable Models	36
3.4	Rasch and Additive Conjoint Measurement	38
3.5	Conclusion	45
4	The Guttman-Rasch Paradox in Item Response Theory	47
4.1	Measurement Level Difference in IRT Models	48
4.2	Guttman and Rasch	50
4.3	Measurement Pretensions	53
4.4	Why Guttman Fails to Yield Interval Measurement	55
4.5	Rasch Is Guttman Plus Error	59
4.6	Error that Improves Precision	61
4.7	Error and Precision in the Rasch Model	66
4.8	Discussion	69
5	How to Avoid Misinterpretation of Interaction Effects	73
5.1	Arbitrary Interactions	74
5.2	Method	86
5.3	Results	89
5.4	Assessing Risk	96
5.5	Discussion	99

6	The Interpretation of Interactions Based on Polytomous Items	101
6.1	Introduction	102
6.2	Simulation Study	105
6.3	Method	106
6.4	Results	110
6.5	Discussion	119
7	Discussion	121
7.1	Summary	121
7.2	Conclusion	130
A	A Bisymmetrical Structure for Vending Machine Bias	135
B	The Axioms of ACM Applied to the Guttman and Rasch Models	139
C	Types of Interactions According to Group Mean Ordering	145
	References	151
	Dutch Summary/Samenvatting	161
