## Acknowledgments

First of all I would like to thank Harry Buhrman, my PhD advisor. Being a student in his group has been one of the most exciting experiences of my life. He got me involved in fascinating research projects, introduced me to many other interesting researchers and gave me the opportunity to explore many beautiful topics in mathematics and computer science. During our discussions he not only taught me valuable tricks of the trade, but he also instilled in me greater and greater levels of tolerance for silly jokes of which I am the subject. Before coming to CWI I was a research assistant for Peter Høyer at the University of Calgary. If I had not met Peter I would have missed out on some great personal inspiration to do scientific research. I am truly grateful for his kind guidance and generosity. For willing to be on my PhD committee and giving many very helpful comments on an earlier version of this thesis I thank Harry Buhrman, Sander Bais, Monique Laurent, David Pérez-García, Oded Regev, Kareljan Schoutens, Frank Vallentin and Ronald de Wolf.

My other colleagues at CWI are also largely responsible for having made my last four years so enjoyable. Ronald de Wolf often gave me much-needed advice on research, scientific writing and giving presentations. For the last few years he has passed on his newspaper to me so I could save some money and help my poor state of knowledge on world affairs. I also very much enjoyed my interactions, both scientific and informal, with Sourav Chakraborty, David García-Soriano, Peter Harremoës, Monique Laurent, Bruno Lof, Arie Matsliah, Fernando de Olivera-Filho, Giannicola Scarpa, Christian Schaffner, Florian Speelman, Ben Toner, Falk Unger, Frank Vallentin, Antonis Varvitsiotis and Stephanie Wehner. It was an honor to have collaborated on papers with Harry Buhrman, Sourav Chakraborty, David García-Soriano, Peter Har-

remoës, Troy Lee, Arie Matsliah, Fernando de Oliveira-Filho, Ben Toner, Frank Vallentin, Thomas Vidick and Ronald de Wolf. In particular I would like to thank Harry, Ben, Fernando, Frank, Thomas and Troy, who worked with me on the papers that form most of this thesis. I thank Peter Høyer, David Pérez-García and Oded Regev for hosting me during interesting and fun research visits at the University of Calgary, Universidad Complutense, LRI and ENS. I would also like to thank the CWI support staff, in particular the librarians for their help with all the obscure books I wanted to read and Maarten Dijkema for his IT support and hitchhiking to Fontaine Bleau to come bouldering.

Last but not least, I thank my family and friends for their help and for giving me so many things to enjoy outside of my studies.

Amsterdam  
August, 2011.
