

The Dutch Method Unfolded

a masterclass to revisit the wax-resin lining method and facilitate the future conservation of wax-resin lined painting

Emilie Froment

Conservation and Restoration of Cultural Heritage, University of Amsterdam

Introduction

- **The Dutch Method Unfolded is a masterclass** that addresses the consequences of wax-resin lining for the today's conservation and future preservation of the paintings that underwent this treatment.
- It is **targeted to professionals in the fields of art history and conservation.**
- It is organized by the **University of Amsterdam (UvA)** and funded by the **Getty Foundation** as part of its **Conserving Canvas initiative.**

1. Rationale behind the masterclass

- Wax-resin lining, also called the Dutch Method, is a treatment method that aims to consolidate canvas paintings. It was invented in the Netherlands in the mid-19th century and was extensively used worldwide until the 1970s.
- This lining method is now abandoned because research showed it was incompatible with modern attitudes towards conservation.
- The abandonment of the practice has resulted in mid-career conservators and curators who have no first-hand experience of wax-resin lining.
- This lack of knowledge may hinder their ability to provide a proper conservation assessment and treatment.
- Today many collections around the world house wax-resin lined paintings that require further conservation treatment.

2. Goals of the masterclass

- **To contribute to the preservation of wax-resin lined paintings.**
- **To fill gaps of knowledge and experience** related to wax-resin lining in the fields of art history and conservation.
- **To increase the current body of knowledge on the topic of wax-resin lining** by inspiring research and triggering collaborations.

3. Program and teaching methods

- The masterclass takes place in the UvA facilities in the Ateliergebouw in Amsterdam (figs. 1 and 2)

- Through the 2-week program the trainees revisit the Dutch method and share knowledge and experience through a range of activities,

> Lectures by experts in the field

The lectures address a broad range of wax-resin lining related topics including the history of the practice in the Netherlands, the unwanted effects to paintings, the ageing properties of the wax-resin mixtures, and the re-treatment of lined paintings. The views of collection managers and art historians on the topic are also addressed by the program.

> Peer presentation session

Each trainee presents a case study or other aspects of wax-resin related research to their peers and the lecturers involved in the program. Each presentation is followed by a feedback session.

> Hands-on workshops on reconstructions

The practical workshops explore the impact of wax-resin lining to reconstructions. The effects examined include color change in ground layers, surface texture, and mechanical behavior.

> Group reflection sessions

The trainees report observations and experience from the workshops and reflect on the outcomes of the workshops.

> Close examination of historical paintings

The Dutch museums partners involved in the program are the Rijksmuseum, Van Gogh Museum, Boymans van Beuningen, Frans Hals Museum, Mauritshuis.

> Networking activities

The aim is to encourage collaborations and build a sustainable community on the conservation of wax-resin lined paintings.

4. Achievements so far

- **The selection process**
43 applications
20 different countries
- **The group of trainees**
15 trainees
From 10 different countries (fig. 3)
10 mid-career
5 seniors
13 conservators
2 curators
- **The reconstructions**
4 different types of reconstruction (fig. 4)
25 reconstructions in total

Conclusion and future perspectives

The Covid-19 pandemic altered the plan to hold the masterclass in Summer 2020. Nevertheless, significant achievements were reached through online activities. This contributed to prepare the trainees to the program to be held in Amsterdam in Summer 2022.
