The work presented in this book would never have been completed without the help and support of many people. I take this opportunity to thank all those people who collaborated and helped me directly or indirectly, in this thesis.

First of all, thanks to God, the merciful and the passionate, for providing me the opportunity to step in the excellent world of the sciences.

I owe my deepest gratitude to my parents for having encouraged me to study continuously and for their support during PhD. They have taught me about hard work and self-respect, about persistence and about how to be independent. Both have always expressed how proud they are of me and how much they love me. My Mother, especially, has played a great role in my progress, she always woke me up very early in the morning to study and she always said: “There is enough time to sleep after death, so work as long as you are alive”. Also, I want to thank my Brothers and Sisters for their emotional help, encouragement and understanding. I would like to express my gratitude to my Father, Mother, Brother and Sisters in law for their support, help and encouragement.

Finally I would like to express my special gratitude to my wife, Maryam for the continuous and ever support, understanding, patience during the past years, and for so much time that you devoted to our sun and me. There is no word to express my gratitude to my little son, Sadra. I owe an immeasurable debt and deep affection to Maryam and Sadra.
