Acknowledgements

I would like to pay special tribute to the staff of the Department of Paediatrics and the Paediatric Research Ward, and to the children and their parents or guardians – particularly those who participated in the studies represented in this PhD but also all those who I met through routine clinical care at Queen Elizabeth Central Hospital between 1995 and 2007. All excellent teachers of paediatrics and public health, providing an important perspective on the value and practice of research and the necessary frequent reminders of the importance of compassion, perseverance, dignity and humour.

I would like to acknowledge and thank most sincerely all of the colleagues that I worked with in Malawi from 1995 until 2007. It is impossible to disentangle the work that went specifically to completing this PhD from the broader activities of clinical care, teaching, other research collaborations and capacity building. Robin Broadhead, Liz Molyneux, Grace Malenga and Anke Borgstein were highly valued colleagues over most of my time in the Department of Paediatrics. Malcolm Molyneux as Director of the MLW Clinical Research Programme provided opportunity, guidance and encouragement for my research aspirations and application. Tony Harries has been an excellent role model and close friend, especially showing the importance of engaging with the wider public health arena and of the importance of data for implementation and advocacy. The paediatricians based in Lilongwe, Peter Kazembe and Charles Mwansambo, provided guidance on national child health issues and were always supportive.

One of the great privileges of working in Malawi was the opportunity to teach and learn from the students, interns, clinical officers, paediatric trainees and research fellows – and in many cases to know them well as friends and to see many progress through each of these strata.

Mandy Walsh provided an excellent foundation for a large amount of the clinical research that has emanated from the Department of Paediatrics by establishing excellent microbiology facilities for the MLW Research Programme that were extended as a clinical service beyond the confines of research. Thanks to all laboratory staff.

The COT/pneumonia study team of Masozi Saiwala, Judith Kaunda, Edith Mfungwe, Symon Kaunda and Tarsizio Chikaonda deserve special mention, and Francis Banda and Bridget Mangochi who often provided care in the COT clinic. Mavuto Mukaka provided excellent statistical support.

I am grateful to the Reproductive and Child Health Group of the Liverpool School of Tropical Medicine particularly Brian Coulter, Bernard Brabin and Luis Cuevas. The Department of Paediatrics hosted many productive collaborations with LSTM. Tony Hart was a constant in many of them and later with support of projects at MLW. Tony was always very supportive of my endeavours. I am also grateful to other friends and colleagues from the University of Liverpool who have provided support to MLW particularly Peter Winstanley, David Lalloo and Steve Ward.
I appreciate the support of funding bodies that have contributed to the work represented in this PhD. These include The Wellcome Trust, the University of Liverpool and UNICEF, Malawi.

I thank Bernard Brabin and Malcolm Molyneux as Promoters of this PhD, and Michael Boele van Hensbroek, for their guidance and tremendous support.

I enjoyed the company and support of many friends in Malawi over the years. Time spent in the earlier years with many of those friends on and around Mt Mulanje, especially Brian and Maggie, Rob, Denis, Brewsters, Borgsteins, Melroses, Clara, Mandy, Mas, Kamija and Malcolm provided the perfect balance to the demands of clinical work. Involvement in activities such as the Mountain Club of Malawi and National Tennis Association provided a lot of fun, perspective and friendships. Thanks to my regular squash or tennis partners/ combatants: John Melrose, Malcolm, Tony, Thomson Mtengula, Julius, Hackson and Gianluca.

Finally, I would like to acknowledge my wife, Arantza Perez, and our children: Jon, Monica and Ana. Arantza received her PhD over 10 years ago. She has provided tremendous encouragement and guidance not just for this PhD but throughout my “second” time in Malawi since 2001. Thanks for the love and support - always insightful and down-to-earth. Repeatedly and always graciously, Arantza gave me the flexibility to contribute to a wide range of work in Malawi, including work related to this PhD. The study reported as chapter 2 in this thesis provided the data to attend the annual IUATLD conference in Paris in 1996 (at Tony Harries’ suggestion) and an opportunity to invite Arantza (who was a PhD student at LSTM at the time) to spend some time in Paris for a few days. It turned out to me the most worthwhile conference that I have ever attended.

I dedicate this PhD to Arantza, our children and to my parents who taught me the importance of focus on things important, hard work and a sense of community, in whatever you do. I also dedicate this PhD to the people of Malawi, especially the children and their mothers. The date of this PhD defence is July 6th, Malawi Independence Day.
