I can't deny that it has taken longer than I expected to formally finish my thesis. After leaving the Netherlands, to start working in the United States in March 2008, it did not take long to publish my last paper. For various reasons, it has taken quite some time to formally defend. At last, it's finished!

I can look back at a great time in Amsterdam. Both my clinical training and research have taught me many things and I have always enjoyed working at the Netherlands Cancer Institute. With mixed emotions, the least to say, I decided to move to the United States where I have been living and working since March 2008. Writing an acknowledgement is always tricky, as the changes are there is always somebody who would feel left out. So sorry, if you are that person :).

First of all I would like to thank the two most important people in my professional life; my graduate advisor Marc van de Vijver and my second graduate advisor and training program director Harry Bartelink.

Marc, although speed is something that was not always first on your list given your many commitments, your inspiration as a true M.D, PhD, breast cancer pathologist and researcher have greatly inspired me. Your thorough reviews of my manuscripts have greatly improved them. Most of all, I have to thank you for the first opportunity you gave me early on (March 2004) to go to Stanford, California. Something that not only has really improved and expanded my research, but also has given me lots of personal joy and has changed my life forever. Spending time there with you (and your family!) during your sabbatical and living and working there, even though that was relatively short, is something that I will always remember.

Harry, you have been a true inspiration in both clinical and basic research and radiation oncology. I have learned many things from you. The Friday morning patient discussions, the 'special patient' teaching session on Monday afternoon, supervision and advice on research and many more things. You have given me so many opportunities. There was always budget available to go to a conference, as long as I was presenting, and even without a presentation, I have attended many conferences. The most memorable two are my first "big presentation" at San Antonio in 2004 and the CERRO 2007 (ski) meeting. I still remember the day I had to tell you I was leaving, not just leaving the NKI, but going to work for a pharmaceutical company :). Leaving the Netherlands has been one of the hardest decisions I had to make in my life.

And Marcel, member of my thesis committee, training program director, but more importantly a truly inspirational M.D, PhD researcher, combining clinical work and basic research.

At Stanford, I would like to thank Howard Chang and Pat Brown. Howard, it has been a great pleasure and an honor to with you first in Pat's lab and later, most of the time, in your lab. You have made me feel very welcome, inviting me to your home and spending time with you and your family. And of course all the

great ideas and input in various papers presented in my thesis, but also other papers we have worked on together.

Pat, it has been an honor to work in your lab. Also, Julie, Ashley, David, John, Adam, Mei, Trevor, Rob and Therese: thank you for making me feel part of the lab and of course thank you all for your help and input in the research and other papers we have worked on together.

In Amsterdam, there are too many people to mention everybody, but I'll give it a try. Bas, you are probably the one who not only helped me to make an informed decision about getting into research, but also made my research-life a lot easier by paving the way. And most importantly, you were always there as a friend.

Britta, Marleen, Hugo and Jolien. Thank you for all the discussions we have had. Hans, thank you for helping me feel a little less clumsy in the lab.

At the radiation oncology department I would like to thank all my resident-colleagues: Caroline, Conny, Desirée, Francine, Fred, Gabrielle, Gerben, Joost, Monique, Nina, Patricia, Philip, Roel and Vera. Thank you all!

Rick and José when I think back about my time as a resident, I mostly think about you two; you truly master the art of teaching clinical radiation oncology. You both have taught me a lot about how to deal with patients, their difficult time in life, their, sometimes final, battle with cancer, and also, you would support a treatment plan as long as it was a good plan, it did not necessarily have to be exactly like you would do it yourselves.

And of course, more important than anything else in life: my family and friends. Thank you all for your support, for listening to my endless stories on things you probably still don't understand (it's not you!) and of course to being there for me, always, also when I had been away, again, spending as much time as possible in Stanford or other part of the States and of course, for still being there, even though I have chosen to move to another country and visit the Netherlands only a few times every year. But I should not forget my new colleagues and friends in the United States. It's hard to start over, but with great friends and colleagues, it becomes a little bit easier.
