Acknowledgments

While writing the list of people to be included in these acknowledgements, I am stunned by the sheer number of people who were willing to spend time and effort in helping me on my way.

Marc, we went through some rough times but made it out in one piece. I thank you for all your energy, encouragements and advice. Christian, for your support throughout this project, your helpful (and fast) comments on the manuscripts and for bringing me back to Amsterdam at the best possible time. Valeria, for your enthusiasm and valuable inputs, even for those that put my (scientific) endurance to the test.

I thank Ysbrand van der Werf for his help during the planning of the TMS study and his supervision during the ONWAR program. I thank Jörn Diedrichsen and Chris de Zeeuw for their scientific input and my promotiecommissie for making this thesis possible.

A warm thank you(!) to all former and current members of the Social Brain Lab, you made this a fun ride. A special thanks goes to: Cui, for introducing me to the lab and teaching me the art of deception. Néomée, for making the toddler study into a fun experience for our baby scientist, their parents and me. Teresa, for the most intense data collection of all times, your kindness and amazing cooking skills. Ritu, for boosting the cerebellum study and being a constant source of good vibes. Yinying, my first Master student, I am so glad you stayed with the lab! Rajat and Filippo, I could not convince you to be my coauthors but thank you for the time and effort to put into my projects. Leonardo, for living the joy and frustration of science and your help with the ToM project. Lawrie, for your great work on the biomotion project and fun discussions. Karina and Giovanna, for being such amazing neighbors in the lab and beyond. Selene, for sharing and discussing science and for dragging my to Singapore and the best dumplings ever. Rune, for all your kindness and help, including countless Dutch translations. Maria, for being a great example of scientific dedication and competitive spirit. Abdel, for your humor and help in preparing the ASD study. Lorena, for your nice literature work on mirror neuron development in children.

I also like to thank everybody at the NeuroImaging Centre in Groningen, for your support during the first two years of my PhD and adopting me during the HBM conference on Hawaii. Nikola, for teaching me TMS and politics. Branislava, for a great cooperation during the TMS project and helpful advice. Anita and Judith,
for all your help during the MRI scanning process and everything I learned about Groningen and ice skating. Hedwig, for your support and your help in repeatedly searching for my lost keys. Shankar, my swimming and diving buddy, for fun times in Groningen. Barbara and Frans, for all your help in setting up the eye-tracking system and analyzing the eye-gaze data. Bram, Joanneke and Harma for your help in recruiting participants with ASD. Annemieke, for performing the ADOS interviews.

A special thanks goes to the members of the babylab Amsterdam. Pralle, Evin, Maartje, Karlijn and Daan, the toddler project would not have been possible without your help.

A huge thanks goes to all actors in my movie stimuli. Too bad we never got to see your pretty faces, but you did a great job! No part of my thesis would have been possible without the patience and commitment of my participants. They endured hours of MRI scanning, came back several times although they knew that a TMS stimulator was waiting for them. A special thanks also goes to the parents and caretakers who took time out of their busy schedule to make the toddler study happen.

I thank Jeroen for bringing my Dutch up to scratch. I thank Eline, Hanna and Christiane for their support and contribution to my research projects during my time in Groningen. I also thank KLM for starting the Amsterdam-Krakow connection, which saved me hours of train rides.

Last but not least, I would like to thank my family. My parents for knowing exactly when to ask about work and when to talk about everything but work and encouragements when needed most. Inga, for your loving support and for letting me contribute to your own exciting research. Torsten, for your earnest interest in my work and for shooting the great cover picture. Sarah, for always cheering me on even during busy times. Alex, for being my best support and favorite distraction.

To anybody I forgot: please be ensured of my thankfulness and forgive an overworked PhD student.
