Acknowledgments

I am grateful for the opportunity I have been given to finalize this thesis. It is therefore my pleasure to thank the ensuing people who have been continuously available to guide me and keep me from straying from the path of science.

Professor Tobias Rinke de Wit has provided valuable support and advice, first during those pioneering years when we launched the Heineken-PharmAccess cooperation and afterwards when the idea grew to write down some of our experiences in order to serve others. Professor Joep Lange is an example for all those who have the ambition to change things for the better. Even when to some of us certain issues seem an impossible challenge, he will go for it. I have mentioned this many times, but his talk in Durban in July 2000 directly challenged our company; he appealed to mining companies and breweries to start treating their employees for HIV/AIDS. At the time he sounded too ambitious in claiming we could treat HIV on 5$ a day. It now appears he was hardly ambitious enough… A special word of thanks goes to Maarten Schim van der Loeff. He has been coaching and supporting me throughout, and encouraging me particularly in those moments when I faced difficulties in getting things on paper. He is a master in clear and concise writing and his advice has helped me a lot.

Finalizing a PhD while working at the same time, as I did, would of course never have been possible without the facilitation of my superior. I am most grateful to Henk Rijckborst for the trust and the many opportunities he gave me. Working with him encompasses a continuous sharing of his experience, his wisdom and his humanity. He taught me many lessons, not least by just being himself. His support and example was and is always an inspiration.

Many people at PharmAccess have been contributing in an important way to the implementation of this programme. Vincent Janssens, Philippe Clevenbergh, Ferdinand Wit, Michèle van Vugt are just some of the excellent staff that PharmAccess could call upon to support the companies and the organizations they partner with. And I am sure that I am forgetting many that have contributed to training, programme design and practical implementation.

I want to express my thanks also to the team of Health Affairs in the Amsterdam office. Erik, Herbert, Katinka, Linda, Petra and Marja, each one of them has made important contributions at some point in the process.

Thank you, Pieter van Thiel for joining the promotion commission during the defence of my dissertation.
I am also very grateful to all our medical staff in Africa that has been contributing to the quality of the programmes described in this thesis. Kitenge Lubangi, Ngozi Onyia, Paul Nsalou, Patrick Sianard, Laetitia Gahimbaza, Gerard Ngendahimana and Fabien Ngendakumana were the doctors that were there from the start of the initiative. Later Jean-Pierre Kabarega, Emmanuel Kamo joined the Heineken family and the HIV programme.

Allow me to express my admiration for the courage of the Executive Board members of Heineken who in 2001 gave the green light to go ahead with this programme. Karel Vuursteen, Anthony Ruys, Jean-François van Boxmeer, Guus Lubsen and Marc Bolland have set an example for the entire corporate sector. Jean-Lou Homé and Tom de Man are the best presidents of an African regional department a company could wish to have. Their love for the African enterprise and the African employees is something any company would be proud of.

I can only begin to imagine the impact this exercise has had on my family, and I am grateful for their patience and in particular thank Mit, my partner, and my children for the support that they have given me during the whole period.

Finally I am grateful to the numerous anonymous HIV-infected patients that I have met during my work in Asia or in Africa. In the years that antiretroviral treatment was not yet available they suffered and died while incessantly hoping that a remedy would come. The injustice of their deaths and the suffering of their next of kin was probably the greatest motivation to make HIV programmes work.
