If you believe that digital publication of certain material infringes any of your rights or (privacy) interests, please let the Library know, stating your reasons. In case of a legitimate complaint, the Library will make the material inaccessible and/or remove it from the website. Please Ask the Library: https://uba.uva.nl/en/contact, or a letter to: Library of the University of Amsterdam, Secretariat, Singel 425, 1012 WP Amsterdam, The Netherlands. You will be contacted as soon as possible.
2.4.4 Single PC with GRAPE ........................................ 24
2.4.5 Grid of PCs with GRAPE and copy algorithm ............... 26
2.4.6 Grid of PCs with GRAPE and ring algorithm ................. 26
2.5 Results of the performance model ................................ 27
2.5.1 Future prospects ............................................ 27
2.6 Discussion and conclusions ...................................... 30

3 Living Simulations: Galaxy Merger using Direct and Tree $N$-body Integration ............................................. 33
3.1 Introduction .................................................... 33
3.2 Living application .............................................. 34
  3.2.1 Rationale ................................................... 34
  3.2.2 How the living application works ......................... 34
    3.2.2.1 Security considerations ............................ 36
  3.2.3 Living simulation .......................................... 36
3.3 Simulating galaxy mergers as a living simulation ............... 37
  3.3.1 Motivation ................................................ 37
  3.3.2 Implementation .......................................... 38
  3.3.3 Experiment setup ........................................ 39
  3.3.4 Results .................................................. 41
3.4 Conclusion .................................................... 43

4 Simulating the Universe on an Intercontinental Grid of Supercomputers .............................................. 45
4.1 Introduction .................................................... 45
4.2 The intercontinental grid ....................................... 46
  4.2.1 Demand on the network ................................... 48
4.3 The simulation environment ..................................... 49
4.4 Simulating the universe ........................................ 50
4.5 Concluding remarks ............................................ 51

5 High Performance Gravitational $N$-body Simulations on a Planet-wide Distributed Supercomputer .................. 57
5.1 Introduction .................................................... 57
5.2 Overview of SUSHI ............................................ 58
  5.2.1 Parallelization across supercomputers .................... 58
    5.2.1.1 Communication scheme ............................... 59
    5.2.1.2 Domain decomposition ............................... 59
    5.2.1.3 Implementation of communication routines ......... 60
  5.3 Performance model .......................................... 60
  5.3.1 Single supercomputer .................................... 61
  5.3.2 Multiple supercomputers ................................ 62
  5.3.3 Scalability across sites .................................. 63
5.4 Experiments ................................................... 64
  5.4.1 DAS-3 experiment setup .................................. 64
7.2.4 Future perspectives and applications ........................................ 110

Nederlandse Samenvatting ................................................................. 111
Acknowledgements ............................................................................. 115
List of Publications ........................................................................... 119
Bibliography ....................................................................................... 123
