## 1 Introduction

1.1 Perturbation theory .............................. 2
1.2 Iterative methods for Eigenvalue Problems ................ 13

## 1 Perturbation theory 23

## 2 Hermitian matrices 25

2.1 Introduction .................................. 26
2.2 Hermitian rank-k perturbations ................. 29
2.3 Bordered diagonal matrices ..................... 39
2.4 Singular Values .................................. 42
2.5 Numerical illustrations ......................... 47
2.6 Final notes .................................... 52

## 3 Normal matrices 59

3.1 Introduction .................................. 60
3.2 Normality preserving augmentation .............. 66
3.3 Normality preserving normal perturbations ....... 70
3.4 Further augmentations ........................................... 78
3.5 Illustrations ......................................................... 84

II Iterative methods .................................................. 93

4 The Subspace Projected Approximate Matrix method .... 95
  4.1 Introduction ...................................................... 96
  4.2 SPAM and other subspace methods .......................... 102
  4.3 Selecting the matrix $A_0$ in the SPAM method .......... 109
  4.4 Numerical illustrations ........................................ 119
  4.5 Conclusions ...................................................... 129
  4.6 Comments on a SPAM linear system solver .............. 130

5 Summary .............................................................. 133
  5.1 The mathematical model ...................................... 134
  5.2 From systems to matrices ................................... 136
  5.3 This thesis ......................................................... 138

Notation ................................................................. 139

Bibliography ............................................................ 141

Index ..................................................................... 149

Samenvatting ............................................................ 151

About the Author ....................................................... 153
