Contents

1 Introduction 1
  1.1 The Third Paradigm 1
  1.2 Problem Solving Environments for Simulations 3
  1.3 Cellular Automata for Simulations 7
  1.4 Thesis Outline 10

2 Problem Solving Environment for Cellular Automata Based Simulations 11
  2.1 Features and Requirements 11
  2.2 Survey of Existing Cellular Automata Based Problem Solving Environments 14
  2.3 Cellular Automata Based Problem-Solving Environment Case Study: The CAME&L Project 18
    2.3.1 Cellular Automata Based Computational Experiment Decomposition 19
    2.3.2 Software Design 20
    2.3.3 Features 22
  2.4 Conclusions 27

3 Exploring Evolving 1D Structures and 2D Universal Data Indexing 29
  3.1 Classification of Structures Generated by 1D Binary Cellular Automata from a Single Seed 29
    3.1.1 Specification of the Transition Function 30
    3.1.2 Initial Conditions 31
    3.1.3 Comparison of Grids’ States as a Basis of Classifications 31
    3.1.4 Invariance with Respect to the Operation “Equality” 33
    3.1.5 Invariance with Respect to the Operations “Equality” and “Inverse” 36
    3.1.6 Invariance with Respect to the Operations “Equality” and “Mirror Reflection” 38
    3.1.7 Invariance with Respect to the Operations “Equality”, “Inverse”, and “Mirror Reflection” 39
    3.1.8 Invariance with Respect to the Operations “Equality” and “Inverse-Mirror Reflection” 40
    3.1.9 Classification with a Single-Cell Offset 40
    3.1.10 Classification with Errors 41
3.1.11 Discussion .......................... 42
3.2 Generalized Coordinates for Cellular Automata Grids .......... 43
  3.2.1 Basic Concepts .......................... 44
  3.2.2 Spiral Generalized Coordinates .................. 47
  3.2.3 Composite Generalized Coordinates for the Grid of Triangles . 56
3.3 Discussion ................................ 60

4 Modelling 3D Tumour Growth 63
  4.1 Introduction ............................... 63
  4.2 Biology of Tumour Growth .................... 64
    4.2.1 Microscopic Subphenomena .................... 65
    4.2.2 Mesoscopic Subphenomena ..................... 71
    4.2.3 Macroscopic Subphenomena ..................... 77
  4.3 Overview of Existing Models ...................... 79
  4.4 Several Models of Tumour Growth ................. 91
    4.4.1 General Considerations ....................... 92
    4.4.2 Algorithm 1. Basic .......................... 93
    4.4.3 Algorithm 2. Optimized ....................... 96
    4.4.4 Experiments ................................. 98
    4.4.5 The Influence of Mitoses Rate on Growth Dynamics ........... 102
  4.5 Conclusions ............................... 105

5 Summary, Discussion and Conclusions 107

A Sample Classes of Structures Generated by 1D Binary Cellular Au-
tomata from a Single Seed 111
  A.1 Nontrivial E-classes .......................... 111
  A.2 EIMO-classes ............................... 112

Related Publications 115
