LI'B AL-MANÂR, AN EGYPTIAN SHADOW PLAY.
SOME COMMENTS ON ORTHOGRAPHY,
MORPHOLOGY AND SYNTAX¹

Liesbeth ZACK
(University of Amsterdam)

1. Introduction

In 1907, while in Egypt, the German Orientalist Paul Kahle (1875-1964) acquired a manuscript dating from the year 1119/1707². He obtained it from Darwîs al-Qaššâš, son of the shadow player Hasan al-Qaššâš (d. around 1900), who had found it in the Egyptian Delta. The manuscript contains a number of texts, which include a shadow play (ḥayâl al-ẓill) entitled Li'b al-manâr (“The play of the lighthouse”). In 1930, Kahle published this particular piece with an introduction, a German translation and a modern version of the play in transcription³. The play tells the story of a battle between Christian invaders and Muslim soldiers, with the action taking place in and around the famous lighthouse of Alexandria, one of the seven wonders of the ancient world. Although the manuscript itself dates from the beginning of the 18th century, Kahle argues convincingly that the poetry within it can be traced back to the 1500s, basing his conclusion on the information he obtained about the poets who wrote

¹ I wish to thank Manfred Woidich for his valuable comments on earlier versions of this article. Of course, any errors remain my sole responsibility.
³ P. Kahle, Der Leuchtturm von Alexandria. Ein arabisches Schattenspiel aus dem mittelalterlichen Ägypten, Stuttgart, 1930 (Kahle, Leuchtturm). During his stay in Egypt, Kahle attended a performance of a modern version of this shadow play and made a transcription of the text. The manuscript Paul Kahle obtained in Egypt and his notes about the play are now kept in the library of the University of Turin. I thank Francesca Bellino for providing me with valuable information about Kahle’s manuscript collection in Turin.
the play, namely, Dāʿūd al-ʿAṭṭār al-Manāwī, his teacher Saʿūd, and ʿAlī al-Nahla, who was the master of the guild of shadow players (ṣayḥ al-ṭariqa).

The events described in the play took place much further back in time than the 16th century; according to Ibn Battūta, the lighthouse of Alexandria collapsed in the first half of the 1300s. Kahle argues that since the play describes the lighthouse in detail, it is likely that it dates from the time when this wonder still existed. This is not, however, irrefutable evidence. Although the play does contain some accurate descriptions of the lighthouse (see Outline of the story below), this does not mean that its author(s) had seen the structure themselves. There are plenty of Arab eyewitness accounts describing the lighthouse in detail, and these might have come to the attention of the poets. However, some of the shadow figures used in the performance of the play have Mamluk arms. These can be dated back to the 13th or 14th century and do, thus, provide us with convincing evidence of the piece’s age.

Shadow figures were made out of leather and sometimes had movable parts. A light source located behind them projected shadows onto a screen, to the rear of which the public was seated. A 19th century shadow play figure of the lighthouse of Alexandria can be seen on p. 351.

The last attack on Alexandria by Christians took place in 1365 during the crusade led by Peter I of Lusignan, King of Cyprus and Jerusalem.

4 See Kahle, Leuchtturm, p. 3-8* (* refers to pages in the German introduction of the book; † refers to the German translation of the play; numbers without a following symbol refer to the Arabic text).
5 His name implies that he came from the village of al-Manawat, a few miles south of Cairo.
6 He saw the lighthouse when he visited Alexandria in 1326. It was already in a dilapidated condition by then due to earthquakes. When he visited Alexandria again in 1349, the lighthouse had collapsed. See D. Behrens-Abouseif, “The Islamic History of the Light-house of Alexandria”, in Muqarnas, 23 (2006), p. 8 (= Behrens-Abouseif, “Islamic History of the Lighthouse”).
7 The earliest Arabic description is by Masʿūdī (d. 956), while the most detailed and accurate description, including measurements, is provided by al-Balawi (1132-1207) in his encyclopaedic Kitāb alif ba‘. For details, see Behrens-Abouseif, “Islamic History of the Lighthouse”, p. 1-14.
8 See Kahle, Leuchtturm, p. 10-11*. Pictures of these figures can be found in the introduction to the book.
9 See Figure 1: Shadow figure of the Lighthouse of Alexandria, dated 1289/1871-2. The figure is reproduced from P. Kahle, “Islamische Schattenspielfiguren aus Egypten. II. Teil”, in Der Islam, 2 (1911), p. 181.
However, by that time the lighthouse had already collapsed. The Christian attacks described in the play do not seem to refer to one specific historical event. The shadow play refers to a messenger sent by the Catalans (p. 22), and in the victory song on p. 48-49, an entire troop of defeated nationalities is mentioned: Catalans (الكيتن), Franks (بنو الأصفر), Genoese (جنوبى), soldiers from Rhodos (روسى) and Cyprus (قبرص), the Knights Hospitaller (الاشباتار), the Knights Templar (ديريه), and even the Spanish king (الفنش).

Shadow plays were written to be performed in front of an audience comprised of people from all walks of life, including those who were not necessarily educated. Accordingly, the language is Middle Arabic rather than Classical Arabic, with a heavy component of the purely colloquial. It is full of interesting samples of Egyptian Arabic. Kahle (1930) does make some remarks on the language in footnotes to the translation of the text, but no systematic study of the dialectal and Middle Arabic features has been conducted until now. In this article, I will therefore first provide an outline of the story, as well as two samples of text. I will then describe the orthographical, morphological and syntactic features found in the piece.

2. Outline of the story

The two main characters in the story are al-Rijim (nicknamed “Cat Father”) and al-Haziq (nicknamed “His Cats”), both of whom commonly appear in Egyptian shadow theatre12. The minor characters are the soldiers protecting the lighthouse and the Christian invaders.

Only fragments of the story have been written down, and these are mainly poems which served as an interlude between action scenes. These poems, which were recited, were often followed by a song (billiq) which was sung by the performers13. The action scenes, however, were in prose and improvised. Since parts of the manuscript are missing as well, the story is far from complete.

11 See Kahle, Leuchtturm, p. 661 for the explanation of these terms.
12 The “Cat Father”, a trainer of cats and mice, also appears in the shadow play entitled ’Ağib wa-’Garib by Ibn Dāniyāl (d. 1310). See Muḥammad Ibn Dāniyāl, Three Shadow Plays by Muhammad Ibn Dāniyāl, edited by the late Paul Kahle, with a critical apparatus by Derek Hopwood, prepared for publication by Derek Hopwood and Mustafa Badawi, Cambridge, 1992, p. 77-78 of the Arabic text.
13 See Kahle, Leuchtturm, p. 128.
The play starts with a few introductory verses, after which there is a description of the lighthouse. It is described as follows: two steep slopes built on pillars lead to the entrance of the lighthouse. The door and windows are brown and decorated with gold. The lighthouse is topped with a dome. It contains an armour room for storing shields and swords, helmets and armour. On top of the building are an observer and an archer, a trumpeter and a catapult shooter. There are cannons as well, along with troops waiting to defend their city.14

There is a long discussion between Al-Ḥāżiq and al-Riḥīm, in which the former urges his colleague to climb the tower to investigate what the enemy is doing. Al-Riḥīm, being a coward, invents all kinds of excuses not to do as asked.

In the next scene, a North-African trader arrives and warns the Alexandrians of the approach of the Christians. Immediately, the troops are called upon to prepare themselves to defend their town. Then, a messenger arrives with the communication that the Christians intend to invade Egypt. There is a comical confusion of tongues between the Christian messenger and the Muslims. The Christian says: فليقبسوا كناكيس ببلاتيس (a nonsensical phrase). Al-Riḥīm, who volunteers as interpreter, translates this with جيوا لنسايس في فوانيس “bring monkeys in lanterns”. Then, al-Ḥāżiq says: اغبر قوله جيوا كم طايفه “Ask him, how many troops have you brought?” Al-Riḥīm asks the Christian: جيوا كم قطايفه “how many pancakes did you bring?” This play on words continues for some time.15

One of the Christians tries to lure al-Riḥīm to his ship with promises of beautiful clothes, riches, and even the chance to make his daughter, Būma (owl), his wife. Al-Riḥīm continues to refuse the offers until he hears of the wonderful food on board the ship, and then agrees to visit.

In the next scene, one of the Muslim soldiers, Hirḍān, has been taken prisoner. Al-Ḥāżiq and al-Riḥīm argue about who should go to see the Christians to bail him out. Eventually, al-Riḥīm starts negotiations with the Christian al-Ǧāḥid about the release of Hirḍān, but they fail to reach an agreement.

The play ends with a song in which the Egyptians praise God for their victory. Many of their enemies have been killed, while others have been taken prisoner.

14 Except for the doors and windows that are decorated with gold, all of the other elements in the description are confirmed by eyewitness accounts. See the various accounts in Behrens – Abouseif, “Islamic History of the Lighthouse.”
15 See Kahle, Leuchtturm, p. 26-27.
3. Two sample paragraphs of the text

Set out below are two extracts from the text which will give the reader an impression of the language used in the play. The first is a poem in which al-Hâzîq tells how a North-African trader warned the Egyptians of the approach of the Christians and then calls upon the Egyptian troops to fight. The second sample is a short fragment from one of the pieces of prose.

Fragment 1

A piece by Al-Hâzîq, summoning Maymûn

1. “This is the North African who has come, o friend, from the most remote country, to advise the nation of Muḥammad, the Lord of the offspring of ’Adnân”

2. He has brought advice and revealed to us what was hidden about those cursed dogs and the gang of tyrants.

16 KAHLE, Leuchtturm, p. 20-21.

17 = لأجل

18 ’Adnân is considered to be the ancestor of the Northern Arabs. See W. CASKEL, art. “’Adnân”, in EI², vol. I, p. 210a.
3. He informed us that all of them are making preparations to fight and have made their equipment ready, o company of friends.
4. They came with troops in warships and galleys, intending to harm the people of the Faith.
5. They are countless armies and all of them are men who are used to fighting battles for ages.
6. But the God of the Creation will humiliate these reprehensible people and He will throw them into eternal damnation, the One, the Judge.
7. Soon he will put the infidels to shame and conquer the reprehensible enemies, and they will not take control, o Lord, o Judge.
8. They will return broken and scattered over the seas, and we will take the goods they brought with them as spoils, o Lord, o Merciful.
9. The people of the Law will rejoice over the conquest and the clear victory, and they will return victorious with joyful hearts.
10. But my desire, intention and wish, o lords, is to bring together all the soldiers and all the knights.
11. And to stir them up to the battle and to tell them: “Get ready for the war against the Christians and those who follow the religion of the crosses!”
12. But my wish is that Maymūn will come and blow the trumpet, and we will make the religion victorious and gain our wages and pardon.
13. And I conclude my words and prose with praise for Ṭāhā, the bringer of good news, the best of the creatures, Muhammad, the Lord of the offspring of 'Adnān."

Fragment 2

يقول الصانع: بابوا القطط السطل من الفضة والعلاقه من الذهب إحتكتت في مقدم الدامركب انقطع وراح في البحر إغطس عليه أروح بوا الصاغه بيعه وإيفض ذهبه وروشه وإعبر خان الخليبي خذ لك قميص ضيف وقبطيه بيضه وعيمكاه بيضه وفاووق إعبر إسعاد إعبر إسعاد إعبر إسعاد

يقول الحارق: سمعت بابوا القطط ما قال ذال الصانع الزهره يقول لك: السطل من الفضة والعلاقه من الدَّهْب (......)

Al-Ṣānī’ says: “Abū al-Qiṭāt, the bucket is made of silver and the chain is made of gold. It rubbed against the bow of that ship, was cut and fell into the sea. Dive after it, get it, and go with it to the goldsmiths to sell

19 Ṭāhā is one of the names of Muhammad.
it. Get its gold and its piasters, go to Khan al-Khalili and get yourself a clean shirt, a white robe, a white turban and a dervish hat. Go and good luck, go and good luck, go and good luck!”

Al-Hāziq says: “Abū al-Qiṭat, did you hear what this al-Sāni’, the flower, said to you? He is telling you: the bucket is made of silver and the chain is made of gold (…)

4. Linguistic Analysis

4.1. Orthography

The text contains many orthographical features that are well-known from other Middle Arabic texts:

- qāf instead of hamza: أمهر "most skillful" (with lengthening of the a to fit the rhyme of the poem) and أمسر “brown” (both on p. 3). This is evidence for the fact that the *q was pronounced as /q/ and that there was some confusion as to which glottal stop corresponded with hamza in Classical Arabic, and which with qāf.21

- The hamza is often absent: ريّس "master" (1 22), ياهل "o people" (7), لجل “because of” (الأجل (7), اسال “ask” (8), روايح “smells” (24), اللبيمة “the depraved woman” (24), رآيه “his opinion” (39).

- Alif otiosum: an alif is added after any final wāw, even if it is part of the root, or the suffix of the 3rd person sg.: أبا القطر “Abū al-Qiṭat” (throughout the text), العدو “the enemy” (2), أيا "it has” (3), إيدو "his hand" (4), ما "what you have seen” (11), رنوا "his Lord” (31).

- The dots on the tā’ marbūta are frequently missing (except in status constructus): جرّالت "an island” (1), دوره خملة “a stupid detour” (25).

- The writing of tā’ instead of tā’ marbūta occurs regularly: قاعت سلاح "an armour room” (7), فنّت فلوس “a bit of money” (39).

---

21 For the discussion on the pronunciation of *q in Egypt, which is closely related to the pronunciation of *g, see M. Woidich – L. Zack, “The g/g -question in Egyptian Arabic revisited”, in E. Al-Wer – R.E. de Jong (ed.), Arabic Dialectology: In Honour of Clive Holes on the Occasion of His Sixtieth Birthday. Leiden, 2009, p. 41-60.

22 The numbers between brackets refer to the page upon which the feature is found in Kahle’s edition.
– The final ā is sometimes shortened and written with hāʾ: مضه “it passed” (7), أرضه, “mankind” (27), أرضه “here” (40).
– There is assimilation of t to the following consonant: يضُوُّره “he scales it” (with secondary emphasis) (2), إضّايفت “I got into trouble” (25).
– Secondary emphasis: all of the words derived from the root SWR are written ∑WR due to the vicinity of the ®, e.g.: يضُوُّره “he scales it” (2), اصوار “walls” (13).
– Scriptio plena: دالك “that” (1), لاكن “but” (12), انتي “you” (e.g. 31).
– There are many examples of alif madīda instead of alif maqṣūra: رما “he shot” (2), ترا “you see” (7), انجرلا “it is revealed” (29), كهد “to be hostile” (31).

4.2. Morphology

4.2.1. The demonstratives

4.2.1.1. Attributive use

There is great variety in the attributively used demonstratives. As well as purely Classical Arabic forms, there are also some Middle Arabic forms, with all kinds of variations: هذالكلام “this speech” (p. 1) (note the merger of the two alifs), دالك البلاد “that country” (1) (with scriptio plena of the alif, d instead of ḍ and no agreement in gender between demonstrative and noun), هذي القضي “this matter” (19).

Other forms are purely dialectal. As has been observed in other works on the historical sources of Egyptian Arabic, the usual place for the demonstrative was before, not after, the noun23. This is unlike Egyptian Arabic today, where the demonstrative is placed after the noun, e.g. ilbēt da, except in some exclamations such as yādī lḥēba “what a nuisance!”24

The attributive demonstrative in Liʾb al-manār always consists of the letter د directly followed by the article, regardless of whether the following word is masculine, feminine or human plural. A few examples

---

are: “this harbour” (1), “these two towers” (4), “this lighthouse” (2), “these notables” (5), “this hall” (7), “those cursed dogs” (20), “now” (34). It is unclear if this should be read as da-l- or di-l-, since no vowel signs are provided. It is, however, known from other works from the 15th and 17th centuries that preposed دى was found much more frequently than دا, even before masculine nouns.

There is also a case of postponed دا: “and those infidels” (30).

4.2.1.2. Independent use

The forms دا، دى and دول can all be used independently. Some examples of the independent use of دا are: دى يحي بسيمه ودا يحي برمحه ودا يحي بقسسه “This one comes with his sword, and this one comes with his spear, and this one comes with his bow” (24), دى أصل دا في الاسكندرية يا رجال أتسعوه “because this one, o men, they founded it in Alexandria” (7), دى كل دا من أجل نصر المؤمنين “all this is for the victory of the believers” (8), دى أش دا كلام المجانيين “what is this speech of madmen?” (6).

Examples of the independent use of دى include: دى دوره خمله “that is a stupid detour” (25), دى تقده للملك “this you will present to the king?” (26). The second example shows that the feminine form دى agrees with a masculine suffix. It is therefore probable that دى functioned as a neutral form. The same phenomenon is found in the case of the feminine form ًانهي “which” in modern Egyptian Arabic, which can be used in combination with masculine and feminine words (see 4.2.6 below).

The plural demonstrative, is also used independently: دى دولة خمله “Do you have something of those, Abū al-Qitaṭ?” (24). Other variants are utilised as well, e.g. دولأ مراكب البحر المالح: دولأ “these are the boats of the Salty Sea” (23), دولأ ده كلام “these are evil” (45), دولأ “those are cursed” (45). This plural form of the demonstrative

26 As opposed to the River Nile, which is also called bahr.
dōla is still found in Egypt today. Another variety found in the play is دوليك أبطال: دوليك “those are heroes” (24).

4.2.2. The demonstrative particle

The form ادى is used as a demonstrative particle: ادى نهار الغنيمة “here is the day of the booty” (15). ادى الحكاية والسؤال “these are the story and the question” (42). This particle is also found in the 17th century text Daf’ al-isr’ an kalām ahl Miṣr and in the 15th century work Nuzhat al-nufūṣ. It is still found in Cairo today as ‘ādi.

4.2.3. The relative pronouns

The Classical Arabic relative pronoun الذي can be used after feminine nouns, e.g. دالِقُهُ العَدَّى “this hall which I describe” (7). The relative pronoun ما is used frequently as well.

Another form of the relative pronoun which is used regularly is ادى: مضه ادى خلف ثانى باب “another door behind the last one” (lit. “the one that passed”) (7). وَدَى عاليسأر أحسن “and the one which is on the left is better” (9). وَدَى حسبي صار “and what I expected, happened” (13). ادى يعادي فِي عمَّرك مَا يعرفي “whoever acts hostilely against you doesn’t know me!” (16). دالِمرَى ادى قد اتى “this North African who has come” (20). There are many other examples throughout the text. What is surprising is the complete absence of illi, the relative pronoun used in Egypt these days.

To my knowledge, no other instances of iddi have been found in historical sources of the Egyptian dialects. It likewise does not exist in modern Egyptian Arabic. iddi and illi have a common origin: they are both contractions of *allaذي. An intermediate form, aldi, is found in a

28 Variants of the demonstrative with –k are still found today in Egypt, e.g. dawwak, dihiyyak, dōlak, etc. See M. Hinds – E. Badawi, A Dictionary of Egyptian Arabic, Arabic-English, Beirut, 1986, p. 273a. The variants are numerous. However, I did not come across a form dōluk.
29 See Zack, Egyptian Arabic, p. 103.
30 See Vroluk, Bringing a laugh, p. 151-152.
31 illi was already in use in the 15th century. See Vroluk, Bringing a laugh, p. 153.
letter written by a Moroccan Jew dating from the first half of the 16th century. In Northwest Africa, iddi used to be the common relative pronoun, while in Andalusia, the short relative pronoun forms, alli, addi and iddi, were used along with alladi; di was used in Northern Tunisia until at least the beginning of the 20th century. In Morocco, (i)ddi was in use alongside (i)lli in the urban dialects until recently. According to Heath, lli has now replaced ddi in all Muslim dialects in Morocco, while ddi and di are still extant in the Jewish dialects. It is possible that iddi and lli existed alongside each other in Egypt, like in the Maghreb, with lli eventually prevailing.

4.2.4. The personal pronouns

The personal pronouns correspond to those found in modern Egyptian Arabic. The personal pronoun 2nd p. sg. is frequently written as انتى (e.g. 11) and اني (e.g. 11). Also: إِحنا "we" (14), انتوا "you (pl.)" (26), هُمّا "they" (26), and هوا "he" (27). انا is frequently written as ونا (e.g. 16).

4.2.5. The genitive exponent

The genitive exponent is مالك "your soldiers" (18), المالك "your money" (47). There are two possible explanations of this form. The first is that it is the equivalent of taba’ in modern Egyptian Arabic, which is interchangeable with bita’ and is not declined for gender or number. This does not, however, explain the alif. The other explanation is that it is a metathesis of bita’, under the influence of taba’.

4.2.6. The interrogatives

The interrogatives are the same as in modern Cairo Arabic, except that اچ and لز still ended in اث. See EKSELL, “Development of d-particles”.

39 WÖDICH, Das Kairenisch-Arabische, p. 233.
40 These forms with اث existed in Cairo until the nineteenth century and can still be found today in rural areas. See ZACK, Egyptian Arabic, p. 105.
– what: different spellings are found: أش (13), أبشي (2). The shortened form اش has been attested in other texts from this period and suggests that the diphthong ay had become ɛ by this time, which was then shortened to e. Note also the word order in the following sentence: “your people are coming to do what?” (24). In modern Cairo Arabic, the only possible word order would be يِميَلُو ‘ɛ, since the interrogative particle is the object and therefore needs to follow the verb.
– whatever: واشما: قُولِي بعينك رأَيتوا واشما
– who: مين, e.g. تطلّعنى لمّا مين أَنا هوا
– why: ليش, e.g. عليه تعزم ما ليش
– which: أنهى: قبِيله أَنهى من إِنت
– where: فِين as in modern Cairo Arabic: القطط يابوا فِين انتم
– how: إِزّى: راجل مانتى إِزّى and كيف: مقامك أعلّى ما كيف

The latter could be a classicism, but since it is still used in Middle and Upper Egypt, it is also possible that إِزّى and كيف existed side by side in that period.

4.2.7. The prepositions

The following phenomena are noteworthy with regard to the prepositions as used in the text:
– ب: the i is lengthened to ɪ when a suffix follows: بِهم “with them” (4). When followed by the suffix of the 3rd p. sg. it becomes بوا bwa “with it” (4). In modern Cairo Arabic, this is normally bɪ, but buh can also be heard; buh is also found in the eastern Delta and Middle Egypt.

See ZACK, *Egyptian Arabic*, p. 94.
See WÖDICH, *Das Kairenisch-Arabische*, p. 51.
The orthography for ɛ occurs very frequently in this text, e.g. حسنوا “its beauty” (4). See 4.1. Orthography.
See WÖDICH, *Das Kairenisch-Arabische*, p. 138.
See BEHNSTEDT – WÖDICH, *Dialektatlas*, maps 378 and 379.
there are some forms with ُا, like in modern Cairo Arabic: معاهم (19). There are, however, also forms without the long ُا, such as معوا (10). It is unclear whether these are classicisms, or whether these long and short forms existed alongside each other in the dialect. The same has been noted by Davies47.

***من***: with a doubling of the ِn when a suffix follows: ملك “from you” (11), ملكا (39), ملكا (39).

***ل***: لوا “for him” (5). ل ُا is often attached to the verb قوله, e.g., أقوله “I tell them” (21), قول “tell him!” (26). The verb ْجأ can be used without a preposition: ْجأ وانه ْجأ “he came to us as a messenger of good news” (21), ْجأ رسل “I came to you as a messenger” (43). In modern Cairo Arabic, this is possible as well, but the verb can also be combined with ل, e.g. ْجأني or ْجألي “he came to me”.

***على***: can be abbreviated to ُع when followed by the article: ُعلمسار “on the left” (9)48.

4.2.8. Particles in combination with suffixes

The particles ْو “by…” (introducing an oath) and ْبِِِسَّ “enough” can be followed by suffixes: ْو اك “by you!” (29), ْبِِِسَّك “enough now!” (45). This is not possible in modern Cairo Arabic. However, ْبِِِسَّك can be compared with the use of ْكَفَا with a suffix today: ْكَفَا ْك “enough now!”49

4.2.9. The verbs

4.2.9.1. أراح and راح

Both the forms أراح and راح “to go” appear: راح مكسور “it is gone, broken” (3), أراح خرك “your good name went away” (13), أراح ْمك “your brother has left you in anger” (35). أراح is found as well in al-Magribi’s Daf’ al-isy50, and in the twentieth century, it was still used by the native Cairene Jews51.

47 Davies, Seventeenth-Century Egyptian Arabic, p. 185-186.
48 As in modern Cairo Arabic, see Woidich, Das Kairenisch-Arabische, p. 22-23.
49 See Woidich, Das Kairenisch-Arabische, p. 299.
50 See Zack, Egyptian Arabic, p. 100.
It might seem that أراح is a form IV; however, this is contradicted by the fact that the imperative is أروح with ُ, while form IV would have أَروح: "get it, and go with it to the goldsmiths to sell it!" (26). “go, make haste!” (40). It is therefore more likely that the alif is a prosthetic alif, indicating the bukara-syndrome (insertion of a vowel in clusters –Crv). The bukara-syndrome can appear at the beginning of a word as well; this variety of the syndrome is found in Middle Egypt today: e.g. arägil “a man” and arama “he threw”.

There are other examples from Middle Arabic texts of this prosthetic alif, which gives the impression of a form IV where a form I would be expected. This was often caused by the elision of the unstressed vowel in the first syllable, which gave rise to an initial consonant cluster. This was then solved by adding the prosthetic alif: zahār > َzhār > َazhār.

4.2.9.2. Stem V

The verbs of stem V have the prefix it-: اَتَحقق “make sure” (4).

Assimilation of the t to the next consonant occurs: وَانَ جَا الَّعُدُودُ يُضَرُّوهُ “and if the enemy came to climb it” (2) (note also the secondary emphasis of the s).

4.2.9.3. Primae wāw

The imperfect of وصل keeps the wāw: إِليكم اِوصلُ حتَّى “until I arrive at you” (17). The imperative of وقف is إِقف “stand still!” (25). In modern Cairo Arabic this is ‘u’af.

4.2.9.4. Primae ʾalif

There are several examples of the word أخذ “to take” without the initial ʾalif: حَرَدان الْرِّجُال “the men took Ḥirdān” (38). Instead of a hamza we find َā in استيسر “to take prisoner” (e.g. 40) (from استسار), which indicates that

53 See BEHNSTEDT – WOIDICH, Dialektatlas, maps 47 and 48.

55 See also VROLIJK, Bringing a laugh, p. 148, for examples from the 15th century.
the hamza may have been replaced by ū, not necessarily in this particular form, but possibly in the maṣdar. استمر استمر استمر استمر.

4.2.9.5. Plural of the imperfect

The plural forms of the imperfect do not have n: they prepare” (21), “they take” (39), “they have power” (45).

4.2.9.6. The participle of جا

In the participle of جا, the ā is shortened before the two consonants: دالمركب جيأ,  "that ship is coming" (25), as in modern Cairo Arabic: gayy, gayya, gayyin.

4.3. Syntax

4.3.1. The bi-imperfect

There are a few examples of the bi-imperfect: الأرياح بوا بيلعب فيه “in it (= the sea) are waves with which the winds play” (7), قل لي أش "tell me what you see up there on the wall, inform me about it” (16), ينظر بعد "he is telling you” (26), ونا بأعلم بالخبر “and I know all about it” (30).

4.3.2. The future marker

The future marker ha-, which is used in Cairo these days, does not occur in this text. Instead, rāyih is used, from which ha developed at a later stage: أموت رايح "I will die” (6), هما رايحين بموتوا من العطش "they will die from thirst” (25), رايح أروح للنصراي "I will go to the Christian” (35). The last example is clear evidence that at this point in time رايح no longer meant “to go”, but had already achieved the status of a future marker.

---

56 On p. 16 almost the same sentence occurs, but without agreement between verb and subject: والأرياح بوا الأرياح
57 i.e. the السور, but is consequently written with ُود, with secondary emphasis of the s.
See 4.1. Orthography.
58 See WOICHER, Das Kairenisch-Arabische, p. 280.
The future could also be expressed with the participle of verbs of movement:

"tomorrow we will leave from here" (40).

4.3.3. The negation

4.3.3.1. لا

The negation لا is the form most commonly used before verbs in the perfect, imperfect and in nominal and prepositional sentences:

- لا يوم طلعت "not once have I climbed up walls" (13).
- لا تعلم "why don’t you invite [me] to it?” (25).
- لا هو جهول "he is not ignorant” (8).
- لا ما هو مثير "it does not have an equal” (7).

لا is found sometimes before the imperfect:

- لا تلقى "you will not find my equal” (11).

4.3.3.2.شي

There is one instance of the negationشي: إن الرسل لا يارموشي عاب "the messenger does not deserve blame” (22 and 23). The negationشي is now the usual way to negate the perfect, imperfect, bi-imperfect and prepositional sentences in Egyptian Arabic. Proof of the existence of the negationشي in the 17th century is found in Hazz al-quhūf.

4.3.3.3. لم

Although لم is utilised to negate sentences in Li’b al-manār, it is not used according to the rules of Classical Arabic. It seems to have the same use as لم, i.e. negating all kinds of sentences, which is a feature of Middle Arabic:

- لم + the perfect are used as a negation of the past tense: لم شفت لك "I didn’t see anything of value in you” (33).
- لم + the imperfect indicative are used for negating the present tense: لم تنطفى "it is not extinguished” (10). 62

---

59 As in modern Cairo Arabic, see WOITCH, Das Kairenisch-Arabische, p. 295.
60 = اسوار with secondary emphasis.
62 This is a general trend seen in Middle Arabic texts. See BLAU, The emergence and linguistic background of Judaeo-Arabic: a study of the origins of Middle Arabic, London, 1965, p. 106.
– لم is also used to negate prepositional sentences: لم فيك كلام “you don’t say anything” (10), and nominal sentences: لم ناس مثلك “there are no people like you” (34).

4.3.4. Agreement

Agreement is often against the rules of Classical Arabic, but is in accordance with modern Egyptian Arabic:
– The human plural can agree with the feminine singular: فيها رجال “in them (= the ships) are men who are prepared to fight the enemies” (36)63.
– The non-human plural can agree with an adjective or verb in the plural: القيود “the heavy chains” (39), يكسروا “rifles that destroy” (45)64.
– كثير can always remain masculine, as in modern Egyptian Arabic65: مناكب كثير “many helpers” (38).
– For the (lack of) agreement between a noun and its demonstrative, see: The demonstratives.

4.3.5. Asyndetic clauses

A subordinate clause can follow a verb without a conjunction, as in خليه بروح “let him go” (38). Like in modern Cairo Arabic, خليه is followed by the object, which is the subject of the subordinate clause66. In the subordinate clause, the verb is in the imperfect.

Final clauses, i.e. clauses indicating a purpose, are also asyndetic: نروح نشتريه وإن جا العدو يصبره “we will go to buy him” (39). In modern Cairo Arabic, these kinds of sentences can be made either with ‘alašan or asyndetically, e.g. nizilt issū “I went to the market to buy a goose”67.

5. Conclusion

Li‘b al-manār is a 16th century Egyptian shadow play which contains a number of typical Middle Arabic features. The negation لم is used in

63 See WOIIDICH, Das Kairenisch-Arabische, p. 249.
64 Ibidem.
65 Ibidem, p. 197.
66 Ibidem, p. 325.
67 Ibidem, p. 379.
combination with the perfect to negate the past tense, and in combination with the imperfect indicative to negate the present tense. It can even be used to negate prepositional and nominal sentences. الّذى can be used in combination with feminine nouns and, in general, the rules of agreement are not applied in the way that they should be in Classical Arabic.

The text also has many features that can be found in modern Egyptian Arabic. Some examples are the personal pronouns, the interrogatives, and the use of the bi-imperfect. There is also one instance of the negation mā-...šī, although the negation mā- is the form most commonly used. There are other features which highlight that certain developments in the language had not yet been completed at the time Li‘b al-manār was written. An example is rāyiḥ, which by that point in history had developed into the future particle, and eventually resulted in the prefix ha- that is used in modern Egyptian Arabic. Another example is the attributively used demonstrative. This was preposed in that period, while it is postposed now. In this text, the preposed demonstrative is always written as د followed by the article, regardless of whether the following word is masculine, feminine or plural, e.g. دالفاعه. The independently used demonstratives are د and دول, like in modern Egyptian Arabic. دول has the varieties دولا and دوليك.

Another interesting feature is the use of the relative pronoun اّدى, which has never before been attested in Egypt, but used to be very common in Andalusia and North Africa. It is, like ىّلى, a contraction of *alla∂i. It is likely that ىّدى and ىّلى have existed side by side in Egypt, with ىّلى eventually prevailing, as happened in Morocco during the 20th century.

Abstract

The Egyptian shadow play Li‘b al-manār (“The play of the lighthouse”) is one of the texts in a manuscript acquired by the German Orientalist Paul Kahle (1875-1964) in 1907. Although the manuscript dates from 1119/1707, the text of the play can be traced back to the 1500s. It tells the story of a battle between Christian invaders and Muslim soldiers, with the action taking place in and around the famous lighthouse of Alexandria, which collapsed in the first half of the 14th century. Shadow plays were written to be performed in front of an audience comprised of people from all walks of life, including those who were not necessarily educated. Accordingly, the language of this play is Middle Arabic rather than Classical Arabic, with a heavy component of the purely colloquial. Li‘b al-manār is full of interesting samples of Egyptian Arabic. In this article, the orthographical, morphological and syntactic features found in the play are described.
