# List of Figures

**Figure 2-1.** Basic transformation approach 8
**Figure 2-2.** Main elements of strategic management according to Johnson & Scholes 11
**Figure 3-1.** The relationship between IT expenditures and organizational performance (from Soh and Markus) 15
**Figure 3-2.** Relationship between architecture, transformation scenario, solution architecture, transformation program and operational processes 16
**Figure 4-1.** Decision tree for big bang scenario example (M€) 22
**Figure 4-2.** Decision tree for phased scenario example (M€) 23
**Figure 4-3.** Probability density function of an example normal distribution 30
**Figure 4-4.** Cumulative probability function of an example normal distribution 30
**Figure 4-5.** Probability density function of an example lognormal distribution 32
**Figure 4-6.** Cumulative probability function of an example lognormal distribution 32
**Figure 4-7.** Example probability density function of the cost (left), revenue (right) and cash flow (middle). 35
**Figure 4-8.** Cumulative probability function of CF(x) 38
**Figure 5-1.** Overview of the business architecture for the domain input handling (picture courtesy of the case study institution) 44
**Figure 5-2.** Probability distribution function for expected benefits 52
**Figure 5-3.** Overview of budget overrun for 70 IT projects 54
**Figure 5-4.** Lognormal analysis for project budget overrun 54
**Figure 5-5.** Lognormal distribution for project budget overrun 55
**Figure 5-6.** Probability density function describing the cost of the business architecture 57
**Figure 5-7.** Probability distribution for expected benefits after operational costs 57
**Figure 5-8.** PDF’s of cost, cash flow and revenue of the business architecture 58
**Figure 5-9.** Cumulative probability function of the cash flow 58
**Figure 5-10.** Sensitivity analyses for benefits 59
**Figure 5-11.** Results of sensitivity analysis for the cash flow function 60
**Figure 5-12.** Comparing cash flows with and without contracting option. Example for fixed price of € 4M. 61
**Figure 5-13.** Likely and expected value of the standard and the contract scenario 62
**Figure 5-14.** Values of $Sp$ and $Fp$ as function of $A$ and $T$. 64
**Figure 5-15.** Intersection line between $Sp$ and $Fp$. 64
**Figure 5-16.** Relationship between option value and fixed-price 66
**Figure 5-17.** Comparison of standard option versus the contract option 67
**Figure 6-1.** Project and success variables (from Wohlin) 73
**Figure 6-2.** Value of the confidence interval multiplier for various sample sizes 82
**Figure 7-1.** Customer satisfaction as function of budget overrun 96
**Figure 7-2.** Customer satisfaction as function of time overrun 97
**Figure 7-3.** Analysis of variance for project timeframe using two project variables 102
**Figure 7-4.** Number of significant $H_0$ statement correlations for each project variable 106
**Figure 7-5.** Project success rates (Standish Chaos Report, 1999). 108
**Figure 7-6.** Correlation between project cost and margin 108
**Figure 7-7.** Comparison of normal distribution budget overrun 111
**Figure 9-1.** Benefits of real options analysis (Kodukula, et al., 2006). 119
**Figure 1-1.** Costs for year 1 140
**Figure 1-2.** Benefits, costs and cash flow for year 2 140
Value of Architecture-Based Business Transformation
