You will be contacted as soon as possible.
# Table of Contents

1 Motivation and research objectives .............................................. 1  
   1.1 Distributed applications: common patterns and characteristics .... 2  
   1.2 Infrastructures for scientific computing ............................... 8  
   1.3 Higher-level middleware systems ...................................... 9  
   1.4 User requirements ....................................................... 13  
   1.5 The research objectives and roadmap ................................. 15  

2 Dynamics of large computing grids ........................................... 19  
   2.1 EGEE – world’s largest computing and data Grid .................... 19  
   2.2 Grid as an infrastructure .............................................. 22  
   2.3 Grid as a task processing system .................................... 27  
   2.4 Summary ........................................................................ 39  

3 Analysis and modeling of task processing with late binding on the  
   Grid .................................................................................. 41  
   3.1 Introduction .................................................................... 41  
   3.2 Task processing model ................................................... 42  
   3.3 Distribution of job queuing time ...................................... 44  
   3.4 Simulation of task processing models ................................. 48  
   3.5 Summary ........................................................................ 57  

4 Development of the User-level Overlay ....................................... 59  
   4.1 Vision ........................................................................... 60  
   4.2 Functional breakdown and architecture ............................... 62  
   4.3 DIANE and Ganga software packages ................................. 63  
   4.4 Operation of the User-level Overlay .................................. 64  
   4.5 The DIANE task coordination framework ......................... 66  
   4.6 The Ganga resource access API and user interface .............. 73
1. Introduction
2. Related work
3. Grids
4. Grid computing with Ganglia
5. User-level Overlay in action
6. Capability computing case study: ITU broadcasting planning
7. Capacity computing case study: LatticeQCD simulation
8. Conclusions and future work
