Table of contents

Introduction .......................................................................................................................... 5
  1.1 Background .................................................................................................................. 5
    1.1.1 The network description ....................................................................................... 5
    1.1.2 From local processes to global behavior ............................................................... 7
    1.1.3 Information processing ......................................................................................... 11
  1.2 Our Thesis ..................................................................................................................... 23
  1.3 Outline of the Dissertation .......................................................................................... 23

The diminishing role of highly connected units in the dynamical behavior of complex systems .......................................................................................................................... 25
  2.1 Introduction .................................................................................................................. 25
  2.2 Results .......................................................................................................................... 27
    2.2.1 Information dissipation time of a unit ................................................................. 27
    2.2.2 Diminishing IDT of hubs ..................................................................................... 35
    2.2.3 Numerical experiments with networks of Ising spins ......................................... 39
  2.3 Empirical evidence ...................................................................................................... 41
  2.4 Discussion .................................................................................................................... 45

Information dissipation as an early-warning signal for the Lehman Brothers collapse in financial time series ........................................................................................................... 49
  3.1 Introduction .................................................................................................................. 49
    3.1.1 How information dissipation can lead to critical transitions ................................. 50
    3.1.2 The data ................................................................................................................ 53
  3.2 Results and Discussion ............................................................................................... 54
    3.2.1 Evidence of IDL as an early-warning signal .......................................................... 54
    3.2.2 Comparison to critical slowing down and other indicators .................................. 56
  3.3 Perspectives ................................................................................................................ 57

Inferring epidemiological parameters from phylogenetic information for the HIV-1 epidemic among MSM ................................................................. 60
  4.1 Introduction .................................................................................................................. 60
  4.2 Materials and methods ............................................................................................... 63
    4.2.1 Current knowledge about the epidemiological parameters ................................. 63
    4.2.2 Simulating the HIV epidemic among MSM ......................................................... 65
    4.2.3 Phylogenetic data .................................................................................................. 68
    4.2.4 Calculating the likelihood of reproducing the cluster-size distribution ................ 71
  4.3 Results ........................................................................................................................ 73
