Acknowledgments

After spending 4 years in (notably damp) Amsterdam and working on this thesis, there is an incredible number of people to thank. Not just in the lab, actually especially outside the lab, it was an experience that I would not trade for anything else. If you are poetically inclined, you can see it as a journey from Rotтерseiland and Kriterion to Science Park and Polder, from having an office almost all to myself to sharing an office with lots of people, from coffee in the SILS Common Room to trained condors. If you are not poetically inclined,… well… sorry.

First, I would like to thank my promotors Chris de Koster and Stanley Brul for welcoming me in their groups and have given me the freedom to pursue the research lines I was interested in and giving me the time and opportunity to set up projects and collaborations.

Similarly, I am deeply grateful to my co-promotors, Leo de Koning and Frans Klis, for the almost daily discussions and supervision and the quick and to the point comments on manuscripts, experiments and life. Leo, thank you for always questioning my biological conclusions and trying to turn me into a bona fide mass spectrometrist, although I am not sure you succeed. I am still a biologist, but I am grateful for the insights you have shared with me. Frans, thank you for your never-ending curiosity, your constant push for more details and deeper digging into scientific questions. Although we did not always agree on all points and my high-flying theories were often deflated by something I oversaw in my reasoning which you pointed out, I think we always managed to find common ground and produce good science.

I am also most grateful to the members of my doctoral committee, Profs. Aerts, de Hoog, Hellingwerf, Morschhäuser and Dr. Munro and Dr. Rep. I would especially thank Prof. Joachim Morschhäuser who introduced me to Candida albicans during my studies and supervised my Diploma thesis for giving me a rigorous education in fungal biology and the recommendation to Frans which got me this position. I also want to thank Dr. Carol Munro for the drinks and discussions we shared during numerous meetings and that helped me refine my thinking about the cell wall.

You wouldn’t be reading this at the end of my thesis without the support of everyone at the Mass Spectrometry of Biomacromolecules and Molecular Biology and Microbial Food Safety groups, who have helped me at one point or another
during the last 4 years. Everyone from the staff to the students have made my stay worthwhile and entertaining. The work discussions and the debates in offices, coffee corners and during lunch will be fondly remembered. Thank you!

I am also deeply grateful for the opportunities provided by being a part of FINSysB under the stellar lead of Prof. Al Brown. FINSysB was more than just generous funding from the European Union, which I am grateful for and that allowed copious amount of travel and experiences, although it was that too. FINSysB brought me in contact with tremendous people who were either doing their own PhD or mentored us to be better scientists or just were around when a group of crazy scientists from Europe were having fun. All the PIs, ESRs and ExRs, I am glad I had the opportunity to work with you and call you my friends and I wish you all the very best, because let’s be honest, I hope you get good jobs and hire me in the future! The meetings at conferences and workshops were always fruitful, productive but most importantly fun. We should do that again soon, just without all the science and work!

I would also like to especially thank Henk and Winfried for not only providing technical support, insights and an encouraging word here and there, but also for many useful and useless, but funny discussions. See you all in Lederhosen!

Being part of the SILS PhD/PD Council was an experience I will miss, since it gave me the chance to work with brilliant people with a passion to do something besides their work in the lab and their PhD. I wish all the past and present members all the best and hope to see each and every one again in the future, hopefully with a beer.

Doing a PhD also requires a tremendous amount of administrative work, which together with my work for the council at some points seemed insurmountable. I am grateful that with the skilled help and friendly words from Bondien, Ans and Maartje we always found a good solution. I would also like to thank all the members of SILS that participated in making my years here a success and most of all fun. I wish you all the best for the future!

The core lunch group (Aleksandra, Alice, Andi, Jeroen, Nadine, Orawan, Philipp and everyone else who tagged along at one point or another) will also be remembered fondly, although only very few people remembered that 12:30 means 12:30! In contrast to the discussions during work, these discussions over lunch and coffee often veered towards the bizarre, surreal and plain hilarious. I will miss these conversations where trained condors are always the final and
acceptable answer. I also already miss the many secondary activities this group provided from movies (Mega Shark! Battle: Los Angeles!) over board games to sports or just hanging out, I really enjoyed it and it will be difficult to find a proper replacement… it will probably be a bottle of scotch!

I have to thank one person in particular, the person who survived 4 years alongside me without giving up, while doing all the work. Alice, it was a pleasure and a privilege working with you and I have never worked with anyone so committed to doing the work, no matter how long it takes and how annoying it is. I would be happy to continue to work with you, but I am glad that you managed to escape and I wish you all the best with your first steps in the industry. For the time we spend, the discussions we had and the work we did, I owe you the deepest gratitude and I am looking forward to meeting you again, and often, in the future.

Natürlich ist keine Danksagung komplett ohne mich bei den Leuten zu bedanken, die mir das alles bis hierhin ermöglicht haben. Meine gesamte Familie (insbesondere LLS!) und besonders meine Eltern haben mich immer unterstützt und mir Rückzugsräume und Unterstützung geboten wenn ich sie besonders gebraucht habe, selbst wenn sich der Sinn meiner Unternehmungen und Forschungen nur selten allgemeingültig erklären ließ. Ohne euch und das Wissen das eigentlich nichts wirklich richtig schief gehen kann wäre ich wahrscheinlich an irgendeinem Punkt gescheitert. Jetzt müsst ihr mich halt als Dr. ertragen!

Last but not least, folgt der Heimat natürlich die Wahlheimat. Würzburg, und da natürlich besonders die nun vierköpfige Familie Jahn, liegen mir nach wie vor sehr am Herzen. Daniel und Biene, ich bin froh und stolz euch als Freunde zu haben und freue mich schon auf unser nächstes Treffen. Und Pauline und Joni, ihr könnt das zwar noch nicht lesen aber glaubt mir, ihr habt tolle Eltern. Bis sehr bald!

At the end, I probably forgot a thousand and one people in these acknowledgments, but please know that even if I forgot and did not thank you explicitly, I am thankful to everyone who helped shape my last 4 years into an amazing experience and therefore helped shape me, as a scientist, and even more importantly, a human being.

And that is it…

Clemens J. Heilmann
