Acknowledgments

Writing a PhD thesis can be a difficult and lonesome job. While writing the thesis was indeed a difficult challenge for me, it was anything but a lonely experience. At CREED, I experienced nothing but an open, friendly and stimulating environment. This made the 3 years of writing my thesis a very good time with many nice memories. So before moving on to the scientific content of this thesis I would like to thank a lot of people.

First and foremost I would like to thank my two supervisors, Theo and Randolph. The amount of their time they invested in giving me feedback and co-writing articles with me is unbelievable. Their office doors were, in Theo's case literally, always open. Even when Randolph became director of education of the faculty, I could still come by on numerous occasions to talk about the latest difficulty that came up in a theory section. I really enjoyed the meetings, where sharp discussions and good humor took turns. And when I kept starting new projects without finishing the old ones, they put enough pressure on me to make sure I finished with the thesis in time, but still allowed me to continue with the side projects. I don't think I could have wished for better supervisors.

Next I want to thank my former office mates and good friends Jona and Adrian. Our office was the loudest office in CREED, or possibly in the whole UvA for that matter and I certainly enjoyed the many passionate and hilarious discussions on every conceivable topic (sometimes also about economics). Apart from the entertainment value, I learned a lot from the office debates and I must say I have yet to meet researchers from my generation that are as sharp and creative thinkers as they are.

I want to thank all my other former colleagues at CREED, Frans, Joep en Arthur, Roel, Klaus, Marcelo, Pedro, Boris, Matze, Anita, Julian, Yang Yang, Ailko, Gönul, Jos, Jeroen van de Ven, Sander Onderstal, Matthijs, Aljaz. For letting me work in an environment that is informal and relaxed at first sight, but that facilitates ambition and sharp criticism at a high level at a second glance. The CREED seminars, 'roundtable discussions', official CREED meetings with coffee and cake and unofficial, very similar meetings with coffee and cake, I enjoyed all of them. I think from now on, whichever institute I will work in, I will try to introduce elements of the CREED culture.

I want to thank Robert, Matija, Petr, David, Marloes, Markus, Zoltan and many other fellow Tinbergen veterans, for making the heavy two year master at TI still a fun experience and for the many drinks, cinema visits, architecture tours and parties that went on also after the master was done. And the colleagues from TIER, Noemi, Thomas and Adam, who ran experiments or played indoor soccer as if they were from CREED.

Next I want to thank my friends outside of Tinbergen or CREED. Erwin, Menno and Pjotter, the "vvd" dinner and regular city and musea visiting club. David who I luckily got to know better even though I left the band we were in. My friends from the debating

society Bonaparte, Joost, Walter, my spare time physics 'tutor' Reinier, Simcha, Mark, Sarie, Michel, Rozemarijn, Alies, Iris, and the many other debaters. Going to the many debating evenings at Bonaparte and tournaments in the country was a lot of fun. And of course my flat mate Victor, a brilliant and creative mathematician with whom I had many greatly interesting conversations.

Finally and mostly, I want to thank my family, my sister Monique and my parents, for all their support and care.
