Why education matters to employers: a vignette study in Italy, England and the Netherlands

Di Stasio, V.

Citation for published version (APA):
List of tables

Table 1.1  Statistics for Computer programming, consultancy and related activities  33
Table 2.1.  The importance of educational features according to the three mechanisms  54
Table 2.2.  An integrated theoretical framework across disciplines  74
Table 3.1.  Summary indicators of the institutional set-up of secondary education systems  98
Table 3.2.  Flexibility in the supply of core tertiary education services  99
Table 3.3.  School-to-work transitions and labour market institutions  102
Table 3.4.  Cross-national variation in the school-to-work transitions of graduates  105
Table 3.5.  Relationship between mechanisms and indicators of graduate employability taken from both graduate and employer studies  118
Table 3.6.  Summary of hypotheses  126
Table 4.1.  A comparison of alternative methods for the study of employers' hiring behaviour  133
Table 4.2.  The employer side of job matching  134
Table 4.3.  Vignette studies about the role of education in employers' hiring decisions  138
Table 4.4.  Construction of the vignettes  141
Table 4.5.  Characteristics of employers and of their organizations (%)  146
Table 4.6.  Characteristics of the jobs for which the hiring was made (%)  147
Table 4.7.  Pair-wise correlations between vignette dimensions, by country (Cramer's V)  149
Table 4.8.  Distribution of characteristics of job applicants across the vignettes  151
Table 4.9.  Size of N  152
Table 4.10.  Variance-component model of employers’ hiring propensities, by country  154
Table 4.11.  Test-retest reliability: consistency of employers’ ratings  156
Table 5.1. Expected relationships between educational features and mechanisms 162
Table 5.2. Descriptives of baseline ratings, by country 164
Table 5.3. Descriptives: employers’ mean hiring propensity, by vignette trait 165
Table 5.4. Linear random-intercept models, by country: hiring propensity 166
Table 5.5. Linear random-intercept models, by country: expected trainability 167
Table 5.6. Linear random-intercept models, by country: fit with corporate culture 168
Table 5.7. Role of internships for non-tertiary applicants 172
Table 5.8. Interaction effect between internships and fields of study 173
Table 5.9. Interaction effect between credentials and field of study 179
Table 5.10. Interaction effect between credentials and level of education 180
Table 5.11. Random-intercept models, by country, with the employer-firm linkages indicator 183
Table 5.12. Interaction effect between credentials and school-firm networks 185
Table 5.13. Distribution of undereducated job applicants in Italy 187
Table 5.14. Comparison of models with and without the undereducation indicator 188
Table 5.15. Random-intercept models, controlling for expected trainability 190
Table 5.16. Random-intercept models, controlling for expected fit with corporate culture 191
Table 5.17. Summary of effects across the three countries 193
Table 5.18. Perceived importance of vignette factors during the hiring simulation 202
Table 5.19. Perceived importance of negative signals and mechanisms 203
Table 5.20. Employers’ use of negative screens in the three countries 207
Table 5.21. Perceived importance of educational features during the hiring simulation 208
Table 5.22. Correlations between the importance attached to the vignette factors and the role of negative signals in hypothetical hiring decisions 210
Table 6.1. Shortlisted applicants and applicants invited to a job interview (%) 219
Table 6.2. Progress of applicants through the stages of the hiring process: transition rates, by vignette characteristic 220
Table 6.3. Probability of being shortlisted: random-intercept logistic regression 223
Table 6.4. Data structure for the analysis of rankings: the rank-ordered logit model 227
Table 6.5. Rank-ordered logit model: invitation to a job interview, by country 228
Table 6.6. Comparison between rank-ordered logit model and conditional logit model 231
Table 6.7. Job-education (mis)matches among applicants invited to a job interview 233
Table 6.8. Likelihood that matched applicants are invited to a job interview: logistic regression 236
Table 7.1. Recruitment channels regularly activated by the organization (%) 252
Table 7.2. Hiring policy of the organization (%) 254
Table 7.3. Expected training investment (%) 256
Table 7.4. Employment protection legislation and constraints on hiring choices (%) 257
Table 7.5. Employers’ agreement with the statement “education imparts job-specific skills”: logistic regression 262
Table 7.6. Employers’ agreement with the statement “education signals expected trainability”: logistic regression 265
