## *Acknowledgements*

The past four years have been an amazing experience for me. On the one hand, working on my thesis has been very interesting, and I do not think I have enjoyed myself with mathematics as much as I have during these years. On the other, during this work, I have had the pleasure of interacting with many great people, professionally as well as personally.

First and foremost, I would like to thank Sergey, my advisor, whom I did not really know when I started my PhD in the beginning of 2010. I thought his style of doing mathematics was somewhat different from mine; where I would usually take a lot of time to try to understand every step completely before moving on to the next, he would go faster through the whole thing, trying to find where it would lead, and only then go back to gain a more complete understanding of the necessary intermediate steps. My hope then was that I would be able to combine those as well as possible. As it turns out, I now work more according to his style than my own, and I have been encouraging my students to do the same.

I really think Sergey turned out to be the best possible advisor I could have had, always making time to answer questions and discuss problems, but mainly encouraging me to make as much out of those four years as I could. So, Sergey, thank you; I learned a lot from you, both mathematically and otherwise.

I would like to express special thanks to Arie and Petya, who have been my closest companions in the work on my thesis. Arie, with whom I have been working together almost since we both started at the university in 2003, has been one of my closest friends ever since. I do not believe that I would have been able to continue mathematics through all these years without someone to share and discover it with. Petya, I have thoroughly enjoyed getting to know you since you started working with us two and a half years ago. I think we have formed a great team, and I have found your enthusiasm about mathematics and many other things very inspiring. Also, I would like to thank you again for inviting me to Moscow, which certainly turned out to be one of the most memorable trips I have ever made.

I would also like to thank Mark and Emily, whom I met at a summer school in Grenoble that I still hear people talk about two years later, even some who were not there themselves, for inviting me to come visit them in Ann Arbor. I had a great time there, discussing mathematics, juggling snowballs, and learning how to party the American way. I am really glad I met you both, and hope to see more of you in the future.

Many thanks go out to my collaborators; Dima, Maxim, Motohico, Nicolas and Sasha. I am very happy with the work we managed to produce, as well as with the way we did. Motohico, I would also like to thank you for the time you took to show me around in San Fransisco and Davis, I have greatly enjoyed and appreciated that.

Of course, I would also like to thank my parents and my sister, without whom clearly not of this would have been possible. Bart, Sas, I have always taken it for granted that you are awesome, I hope you know that. Jori, I think we have always complemented each other really well, being very different in some ways, very much alike in others. I think I learn as much from you as I could from anybody else. Thanks for being such an amazing sister.

Finally, Ellen, I think you have been a part of this process almost as much as I have, and I appreciate the energy you put in when I had less to give due to pouring it all into my work. I am not sure I would have been able to do this without you, and I am sure that I would have been much less happy. I hope I will be able to make you as happy during your work on your thesis as you have made me during mine.

Bedankt allemaal!  
Loek.
