# Table of contents

**Chapter 1:**
General introduction and thesis outline.

**Part I: Thrombus aspiration and histopathology in ST-segment elevation myocardial infarction**

**Chapter 2:**
Histopathological characteristics of thrombectomy specimen after primary percutaneous coronary intervention in patients with ST-elevation myocardial infarction.

**Chapter 3:**
A pattern of disperse atherosclerotic plaque microcalcifications identifies a high inflammatory burden in thrombectomy specimen of STEMI patients undergoing primary percutaneous coronary intervention.
*Atherosclerosis* 2011 Sep; 218(1): 83-89.

**Chapter 4:**
Early onset of endothelial cell proliferation in coronary thrombi of patients with acute myocardial infarction – implications for plaque healing.

**Part II: Thrombus aspiration, thrombus age, and prognosis after ST-segment elevation myocardial infarction**

**Chapter 5:**
The presence of older thrombus is an independent predictor of long-term mortality in patients with acute ST-elevation myocardial infarction treated with thrombus aspiration during primary percutaneous coronary intervention.

**Chapter 6:**
Incremental value of thrombus age to multiple biomarkers for the prediction of 1-year mortality in patient with ST-segment elevation myocardial infarction.
*Submitted for publication.*

Chapter 8: Thrombus aspiration alone during primary PCI as definitive treatment in acute ST-segment elevation myocardial infarction. *Catheterization and Cardiovascular Interventions* 2012 May 1; 79(6): 860-867.

**Part III: Atherosclerosis in sudden (cardiac) death patients**

Chapter 10: Natural progression from pathologic intimal thickening to late fibroatheroma in human coronary plaques: a pathology study. *In preparation for submission.*

Part IV: Summary and final remarks

Chapter 13:
Summary and conclusions 201
Samenvatting en conclusies 209

Chapter 14:
Dankwoord 217
List of publications 223
Curriculum Vitae 225
