You will be contacted as soon as possible.
## Contents

1. General introduction and outline ................................................................. 7

2. Behavior of lipiodol markers during image-guided radiotherapy of bladder cancer ............................................................................................................................... 17

3. Finite element based bladder modeling for image-guided radiotherapy of bladder cancer .......................................................................................................................... 31

4. A voxel-based finite element model for the prediction of bladder deformation ........................................................................................................................... 47

5. Automatic bladder segmentation on CBCT for multiple plan ART of bladder cancer using a patient-specific bladder model .............................................................................. 65

6. Semiautomatic bladder segmentation on CBCT using a population based model for multiple plan ART of bladder cancer ............................................................................. 85

7. General discussion and conclusion ............................................................... 105

8. Appendices .................................................................................................... 115
   Summary ............................................................................................................ 117
   Samenvatting .................................................................................................... 121
   Bibliography ..................................................................................................... 125
   Acknowledgements ........................................................................................... 137
   List of publications .......................................................................................... 139
   Curriculum vitae ............................................................................................. 141
