Acknowledgements

I would like to take this opportunity to thank the following people, who have been so supportive during the development of my PhD thesis.

First of all, Karien, thank you so much for your support, and your confidence in this project. I always found our meetings very inspiring, and they gave me a lot of good energy. You challenged me to produce reasoning that was critical, sharp, and clear, and these are qualities I will carry with me the rest of my life.

Irene and Charles, my co-supervisors, you were always there for me. The process of some of the papers was not always a straight line from original idea to finished article. But thanks to you, every step – from literature searches, planning, the first analyses, going back to the literature, the writing process, keeping to my schedule, and finalizing the thesis manuscript – has been an incredible learning experience. You helped me grow as a researcher and guided me as much as possible. I’m so very grateful to you both.

I would also like to express my gratitude to the doctoral reading committee – Prof. A.P. Verhoeff, Prof. M.H.W. Frings-Dresen, Prof. W. van Mechelen, Prof. J.A.M. van Oers, and Prof. B.J.C. Middelkoop – for taking the time to review and assess the final version of my thesis.

My coauthors during this project, especially Raj, Anton, Paola, James, Nigel, and Lizzy, thank you so much for your comments and the discussions we had. I greatly appreciate your time and input.

To my colleagues over the years from the Social Epidemiology research group – Anton, Tanja, Mary, Charles, Irene, Marieke S., Vera, Wim, Maaike, Margot, Birthe, Aimée, Marieke de H., Louise, Wanda, Ceren, Wietske, and Karen – thank you for the input you gave when we discussed parts of this work.

The reading group, originally started as a diabetes reading group, organized by the junior researchers at the department – Mirjam K., Marieke H., Linda, Margot, Birthe, Erik, Charlotte, Jennifer, Marieke de H., Aimée, Fiona, Floor, Marieke van den B., and Wietske – thank you very much for reflecting on and discussing some of the first drafts of the papers presented in this thesis. Thank you Femke, Conny, and Barbara for your time and your thoughts on how to improve some of the texts during the writing courses I participated in, and of course, thank you, Marie-Louise, for organizing one of these courses in the department.

Wim, during the second part of the project, I was always welcome to pop in to discuss practical statistical issues ranging from very general discussions to the very specific analyses presented in this thesis: thank you so much for your time, dedication, and knowledge.

My office-mates during the years at the department – Charlotte, Jennifer, and of course my former office-mates Diana and Bastiaan – your presence both at work and after work has been very rewarding. Uzor, Margot, Denise, Maaike, Helen, Mirjam K., Erik, and Sabine, although we’ve spent time together at the office discussing our projects, I’ve also spent
some quality time with most of you after working hours, which has been great – thank you for your kindness and your friendship.

Henriette, Noor, Nita, Michèle, Lydia, and Magritt, thank you so much for helping me out with the practical paperwork. And Colleen, thank you very much for your assistance with the language editing. You saved me so much precious time, which helped me finish this thesis.

And thank you to all my other colleagues – Thomas, Guus, Ines, Asgar, Janneke, Conny, Majda, Marie-Louise, Simone, Sandra, Claudia, Doenja, Eva, Jeanine, Corrette, Mirjam F., Marielle, Annemarie, Mariël, Melanie, Karen, Hans, Barbara, Onyi, and everybody I forget to mention – who all contributed to the very good atmosphere at work.

Some friends have been closer than others, and I would especially like to thank Rijco for his close friendship – I will miss the early-morning conversations we had while drinking cups of coffee before going to work in Amsterdam Zuidoost. I would also like to take this opportunity to thank Christiaan, Katja, Marie Louise, Tessa, Karin, Carlien, Femke, and Ellen – we’ve known each other since we all started at the VU. Despite our busy schedules we still try to meet up regularly and this feels very special – I hope we can continue to meet up for a long time to come. And also to all the other friends I’ve met over the past years – although your names might not be listed here, you are not forgotten!

Of course, I would like to thank my family for their support during these last years. Thank you to my parents for supporting my path in life as a researcher. Selma, you’re the best mother-in-law I could wish for – you’ve been very much involved in this undertaking, and during some of the most crucial moments you were there to help out, and I want to thank you so much for this. Pim, my brother, I know you’re always there for me, and this has been a huge support. My grandmother, my late grandfather, and Petra, your interest in my academic career, its progress, and all the results was truly boundless. Nieta and Wim, my aunt and uncle, we’ve had some good conversations about my work and the project – thank you for your interest and support.

My paranymphs1, Erik and Christiaan: Erik, I’ve known you almost my entire life. I treasure our friendship and your strong interest and enthusiasm for my PhD project, which has been very stimulating. Christiaan, in 2001 we started the adventure called Health Sciences together at the VU in Amsterdam, and we’ve kept in touch. It means a lot to me to have the two of you at my side as I defend this thesis.

Ella, we met each other in Essex, and Hrefna Sif summarized it quite accurately: This is true love at first sight. There are absolutely no words to describe the amount of support you’ve given me during these years, and I can’t thank you enough. And of course Esja, already one year old – from the day you were born you inspired me with your energy, your strong will, and your determination.

---

1 In the Netherlands, a paranymph is someone who supports a PhD candidate while they defend their doctoral thesis.
