Quantitative and localized spectroscopy for non-invasive bilirubinometry in neonates

Bosschaart, N.

Publication date
2012

Citation for published version (APA):
List of symbols

**general**
- $t$: time
- $f$: frequency
- $\lambda$: wavelength
- $k$: wave number
- $d$: depth
- $\varepsilon$: geometrical path length
- $\Delta \lambda$: wavelength resolution
- $\Delta k$: wave number resolution
- $\Delta f$: frequency resolution
- $h\nu$: photon energy
- $\varnothing$: diameter
- $r$: radius
- $D$: thickness

**optical properties**
- $\mu_t$: attenuation coefficient
- $\mu_a$: absorption coefficient
- $\mu_s$: scattering coefficient
- $\mu_s^{\text{red}}$: reduced scattering coefficient
- $\mu_b$: backscattering coefficient
- $\mu_b^{\text{NA-corrected}}$: NA-corrected $\mu_b$
- $\mu_{\text{eff}}$: effective attenuation coefficient
- $p(\theta)$: scattering phase function
- $g$: scattering anisotropy
- $n$: phase refractive index
- $n_g$: group refractive index
- $a$: scattering scaling factor
- $b$: scatter power
- $c$: chromophore concentration

**diffusion theory**
- $l$: spectral intensity
- $R$: remittance
- $r_j$: fiber distance from source
- $z_0$: modeled source position
- $z_b$: modeled virtual source position
- $A$: empirical parameter
- $\alpha$: proportionality factor
- $\beta, \gamma$: validity limiting parameters

**LCS system and geometry**
- $x_S$: sample arm length
- $x_R$: reference arm length
- $\Delta \lambda$: optical path length difference
- $\lambda_0$: center wavelength
- $\lambda_{\text{FWHM}}$: wavelength bandwidth
- $l_c$: coherence length
- $S_0$: source power spectrum
- $T_c$: system coupling efficiency
- $\zeta$: system calibration constant
- $\alpha$: scaling factor
- $\xi_f$: focus position in path length units
- $Z_R$: Rayleigh length
- $w$: beam waist
- $Q$: solid angle
- $\Theta$: (focusing) angle
- $M$: number of modes

**LCS acquisition**
- $\Delta x_S$: sample arm displacement
- $\Delta x_R$: reference arm displacement
- $v_R$: reference mirror velocity
- $f_R$: reference mirror scanning frequency
- $\Delta R$: reference mirror scanning amplitude
- $Z$: path length scanning window
- $N$: number of samples
- $f_s$: sampling frequency

**Brownian motion**
- $\Delta f_D$: Doppler frequency shift
- $k_B$: Boltzmann constant
- $T$: temperature
- $\eta$: viscosity

**LCS spectroscopic detection**
- $n_S, n_R$: sample/reference arm fraction
- $d_{\text{max}}, \Delta L_{\text{max}}$: imaging depth/path length
- $\delta k_s, \delta \lambda$: spectrometer pixel width
- $N_p$: # pixels
- $\tau$: integration time
- $f_D$: Doppler frequency
- $\varepsilon$: detection efficiency
- $\Delta \lambda_{\text{ref}}$: reference mirror scanning window
- $\Delta \lambda_{\text{spectro}}$: spectrograph probing window

*(bold-faced) printed characters in this thesis denote wavelength dependent parameters*
