## **ABOUT THE AUTHOR**

Anja van't Hoog was born in Schipluiden, the Netherlands on March 21st 1964 and attended secondary school in Delft. She obtained a medical degree from the University of Utrecht in 1993. After having worked as a resident medical officer in internal medicine, surgery, obstetrics and gynecology, and pediatrics in several Dutch hospitals, she completed the Dutch course in Tropical Medicine and Hygiene at the Royal Tropical Institute in Amsterdam in 1996 and moved to western Kenya.

She was a general medical officer in two rural hospitals near Kakamega and joined the KEMRI/CDC program in Kisumu in 2000. While working on programs to establish services in Kisumu for the prevention of maternal-child HIV transmission, HIV counseling and testing, and HIV care and treatment, she developed an interest in epidemiology. She completed an MSc in epidemiology through the external programme of the London School of Hygiene and Tropical Medicine in 2005 and became involved in tuberculosis epidemiology.

As the local co-principal investigator she coordinated all aspects of the tuberculosis prevalence survey and other studies described in this thesis. She also was the coordinator of a grant from the European and Developing Countries Clinical Trials Partnership to conduct cohort studies and build site capacity in preparation for tuberculosis vaccine trials. She became the head of the TB research branch that was established at the KEMRI/CDC research and public health collaboration in Kisumu in 2007.

In 2010 she relocated to the Netherlands to focus on the completion of this thesis at the department of Clinical Epidemiology, Biostatistics and Informatics at the Academic Medical Centre, and joined the Amsterdam Institute for Global Health and Development in July 2011 as a postdoctoral fellow / epidemiologist. She intends to continue her career in the field of global health, TB and HIV, and to work in Africa again in the future.
