ACKNOWLEDGEMENTS

The studies presented in this thesis were conducted during my work as the Director of the Department of International Cooperation and Research at the National Center for Tuberculosis (TB) Control and Prevention, part of the China Center for Disease Control and Prevention. These studies were supported by and share the same goals as the China Global Fund TB Program, the WB/DFID China TB Control Project and the China National Key Project. Many other organizations and individuals also made invaluable contributions to the success of the studies in this thesis, and this work would not have been possible without their help.

I would like to sincerely express my heartfelt gratitude to:

- Professor Martien Borgdorff, Dr. Susan van den Hof and Dr. Marieke J van der Werf for introducing me to epidemiological research, for valuable epidemiological and statistical advice, for guidance through the research and administrative processes, for always having time to listen, assist and comment, and for great encouragement. This thesis could not have been completed without your contribution.

- The Chinese Center for Disease Control and Prevention (China CDC), in particular my supervisor Professor Wang Yu (Director General), for providing guidance and support through my research projects in China, also for giving valuable advice on drafting research papers and thesis.

- The National Center for Tuberculosis Control and Prevention, China CDC, Professor Wang Lixia (Director), Professor Cheng Shiming (Deputy Director) and Professor Zhao Yanlin (Deputy Director) for allowing me to carry out the studies in China and supporting my training in both China and the Netherlands.

- The Directors of the KNCV Tuberculosis Foundation (KNCV) and the staff of the Research Unit for their technical and financial support of my training. Your support made my training in the University of Amsterdam possible.

- The colleagues, friends and my master degree students at our department in the China National Center for Tuberculosis Control and Prevention for
their collaboration on the research and support for the studies, and for taking over the heavy burden of my work when I was in the Netherlands.

- The leaders, colleagues and friends at the Shandong Provincial Chest Hospital, Heilongjiang Provincial TB Control Institute and Henan Provincial TB Center for their collaboration and great contribution.

- The colleagues, friends, and staff at the China national and provincial tuberculosis laboratories and county/district TB Centers for their hard work on the collection and examination of sputum specimens.

- My co-authors for your close and effective collaboration and support in our studies and publications.

- Dr. Catharina (Kitty) van Weezenbeek, Prof. Dr. Dick van Soolingen, Dr. Fabio Scano, Dr. Jay K. Varma, Dr. Christopher P. Tostado, Dr. Hui Guo for your technical and research assistance and sharing knowledge on TB and TB control in China.

- All the TB patients, health care workers and TB staff for their participation in the studies. This work would not have been possible without them.

- Ms. Will Maruanaya at the University of Amsterdam for your very kind and effective assistance in all administrative matters and in the promotion process.

- All of the KNCV family for your help and encouragement especially Mrs. Elly van Leeuwen and Mrs. Carla Lanen for their warm hospitality and effective administrative assistance. Your help made my study in the Netherlands fruitful and enjoyable.

- The Brethren of the stadsklooster Vincentius’ Hof in Den Haag for giving me a warm home at Westeinde, and for your kind hospitality and care during my stays in the Netherlands.

Finally, I would like to thank my parents, sisters, brothers, wife and son for their love, support, and great encouragement in my life, my work, and my studies.
