Dankwoord

Acknowledgments

The studies that are part of this thesis would not have been possible without the support of numerous people who have been so generous with their time, advice and friendship over the past several years.

First, to my co-supervisors Wim van den Brink and David Juurlink. Wim, thank you for your willingness to accept me as a student and guide me through this process. You have always been so incredibly generous with your time, kind and supportive with your comments, and your insight and perspective on this research has been invaluable. Dave, I have learned so much from you over the past many years of working together, and will always be inspired by your approach to research. Your passion, intellect, creativity, and thoroughness have made this work stimulating, challenging, and fun! And, I of course would be remiss if I didn't thank you for all of the "Juurlink-ing" of my manuscripts over the years! I will forever be a better writer because of it!

To Muhammad Mamdani who reached out to me in 2008 and brought me back to research. Since that time, you have played the role of boss, colleague, and friend. I have been so fortunate to have you as a mentor to help guide and support me over the years, and I am certain that I would not be where I am today without you. Thank you for all of your time and humor over the years (and for not giving up on me despite all of my teasing!).

A special thanks to my committee members for your critical review of my thesis. This wouldn't be possible without you being so generous with your time and expertise.

To the Ontario Drug Policy Research Network's (ODPRN's) team of researchers, statisticians, epidemiologists and clinicians – thank you for being as excited by data as I am, and for indulging me in my (sometimes) geeky discussions. You make coming to work every day so much fun.

I have been exceptionally fortunate to collaborate with so many talented people over the course of completing this work, including Tony Antoniou, David Henry, Irfan Dhalla, and Beth Sproule. I am grateful for your insight, contributions, and patience throughout this process! A special thanks to Tony for the random videos that always seem to come at just the right time to brighten my day.

A great deal of this research would not have been possible without the continued commitment of the Office of the Chief Coroner of Ontario – including the Chief Coroner Dr. Dirk Huyer – to supporting research in this area. I am incredibly appreciative of all of the efforts that have been put into the creation and ongoing revision of the opioid-related deaths database in Ontario, and for your strong support

in making this available to researchers and public health officials who are working in this area.

To the Ontario Ministry of Health and Long-Term Care, and particularly the team at the Ontario Public Drug Programs for not only funding a large amount of this work, but more importantly for your collaboration over the past 8 years. Your dedication to public service and incredible knowledge of drug policy and pharmacology is inspiring, and your willingness listen to my ideas, and share your insight has taught me so much about the various perspectives that must be taken when conducting drug policy research.

None of this research would be possible without the amazing leadership and staff at the Institute for Clinical Evaluative Sciences. Mike Paterson – you have been a constant source of support and advice for me, and have helped me to navigate through the various crossroads that I have come to in my career over the past many years. Thank you for always believing in me, but also asking the tough questions along the way to keep me grounded (and realistic!).

To the leadership at St. Michael's Hospital – in particular Drs. Andreas Laupacis and Art Slutsky – thank you for taking a chance on me. I consider myself incredibly fortunate to have benefited from your guidance and support, and to have you in my corner rooting for me. Every day, I'm thankful to work in the supportive research environment that has evolved through your leadership.

Finally – to my family.

Thank you mum and dad for raising me in an environment where I felt like anything was achievable, but also knew that I could set my own goals, without pressure or expectation. Your unconditional love, support, and belief in me have been constants in my life, and I can only hope that I can create a similarly loving, supportive home life for my family in the future. Savannah and Ian – thank you for being my best friends and confidantes, and for injecting music, dancing, and political debate into all of our family dinners!

Ken, your love, selflessness, and (most importantly!?) patience never fail to ground me in what is really important. I could never have done this without you.

And finally, Emmett, thank you for sleeping through the night (most of the time), the plentiful hugs, and for bringing so much light, love and laughter into my life. xx
Tara
