LUNG-PROTECTIVE VENTILATION IN INTENSIVE CARE UNIT AND OPERATION ROOM

TIDAL VOLUME SIZE, LEVEL OF POSITIVE END-EXPIRATORY PRESSURE AND DRIVING PRESSURE

ARY SERPA NETO
LUNG-PROTECTIVE VENTILATION IN INTENSIVE CARE UNIT AND OPERATION ROOM – TIDAL VOLUME SIZE, LEVEL OF POSITIVE END-EXPIRATORY PRESSURE AND DRIVING PRESSURE

ACADEMISCH PROEFSCHRIFT

ter verkrijging van de graad van doctor

aan de Universiteit van Amsterdam

op gezag van de Rector Magnificus

prof. dr. ir. K.I.J. Maex

ten overstaan van een door het College voor Promoties ingestelde commissie,

in het openbaar te verdedigen in de Agnietenkapel

op vrijdag 15 september 2017, te 14.00 uur

door Ary Serpa Neto

geboren te São Paolo, Brazilië

Contents

GENERAL INTRODUCTION

Chapter 1  General introduction and outline of the thesis  05
Chapter 2  Association between use of lung-protective ventilation with lower tidal volumes and clinical outcomes among patients without acute respiratory distress syndrome: A meta-analysis  
\textit{JAMA} 2012;308(16):1651-9
Chapter 3  Dissipated energy is a key mediator of VILI: Rationale for using low driving pressures  
\textit{Annual Update in Intensive Care and Emergency Medicine} 2016;1:311-22

VENTILATION DURING GENERAL ANESTHESIA FOR SURGERY

Chapter 4  Incidence of mortality and morbidity related to postoperative lung injury in patients who have undergone abdominal or thoracic surgery: A systematic review and meta-analysis  
\textit{Lancet Respir Med} 2014;2(12):1007-15
Chapter 5  Optimizing the settings on the ventilator settings: High PEEP for all?  123
Chapter 6  Association between driving pressure and development of postoperative pulmonary complications in patients undergoing mechanical ventilation for general anaesthesia: A meta-analysis of individual patient data  
Chapter 7  Kinetics of plasma biomarkers of inflammation and lung injury in surgical patients with or without postoperative pulmonary complications  
\textit{Eur J Anaesthesiol} 2017;34(4):229-38

VENTILATION IN CRITICALLY ILL PATIENTS WITHOUT ARDS

Chapter 8  Ventilation with lower tidal volumes for critically ill patients without the acute respiratory distress syndrome: A systematic translational review and meta-analysis  
Chapter 9  Lung-protective ventilation with low tidal volumes and the occurrence of pulmonary complications in patients without acute respiratory distress syndrome: a systematic review and individual patient data analysis  
\textit{Crit Care Med} 2015;43(10):2155-63
Chapter 10  Association between tidal volume size, duration of ventilation, and sedation needs in patients without acute respiratory distress syndrome: an individual patient data meta-analysis  
\textit{Intensive Care Med} 2014;40(7):950-7
Chapter 11  Epidemiological characteristics, practice of ventilation, and clinical outcome in patients at risk of acute respiratory distress syndrome in intensive care units from 16 countries (PRoVENT): an international, multicentre, prospective study  
\textit{Lancet Respiratory Medicine} 2016;4:882-93
Chapter 12  Potentially modifiable factors contributing to outcome in patients without ARDS under invasive mechanical ventilatory support – a secondary analysis of PRoVENT  359
Submitted for publication

GAS-EXCHANGE SUPPORT IN CRITICALLY ILL PATIENTS WITH ARDS

Chapter 13  Extracorporeal life support – a ‘breath-taking’ technology  399

Chapter 14  Associations between ventilator settings during extracorporeal membrane oxygenation for refractory hypoxemia and outcome in patients with acute respiratory distress syndrome: A pooled individual patient data analysis  407
Intensive Care Medicine 2016;42:1672-84

Chapter 15  Impact of ventilator settings in patients with ARDS undergoing extracorporeal carbon dioxide removal: A pooled individual patient data analysis  457
Submitted for publication

GENERAL DISCUSSION

Chapter 16  Summary & general discussion  491

Chapter 17  Nederlandse samenvatting  505
