Acknowledgements

First and foremost of all, I would like to thank my supervisor Peter Boswijk, for his continuous support and trust in me throughout my PhD studies. When this project was started, I had little knowledge on the subject, but Peter's guidance and trust in me helped me to grow in the field and find the way out of difficulties. PhD studies were one of the best experiences in my life so far and I feel indebted to Peter in many ways for that.

Further, I would like to express my appreciation and gratitude to the members of the doctoral committee for their careful reading and comments on the manuscript: Søren Johansen, Uwe Hassler, Kees Jan van Garderen, Cees Diks and Siem Jan Koopman. In particular, I would like to thank Søren for helping me out during what was probably the most difficult period of my PhD research, when the whole project reached what it seemed to be a dead end. His patient guidance during the time spent with me is hugely appreciated.

Additional thanks go to the colleagues and friends in the department: Jan Kiviet for the introduction to the wonders of econometrics, Simon, Yang, Gao for the numerous late evening talks, Ida and Kees for the secretarial support and many others.

I also would like to thank the director of Center for Research in Econometric Analysis of Time Series (CREATES) Niels Haldrup for his kind welcome during my stay in Aarhus. Those two months in CREATES were among the most productive in the last few years.

Last but not the least thanks go to my friends all over the globe and in particular to a small group of Lithuanian friends in Amsterdam who had helped me both to withstand the moments of "yet another mistake in the proof" and share the joys of discoveries: Paul Sai Wat, Paulius, Rasa, Justinas, Elvina and Ieva. Those years in Amsterdam would not have been so much fun without you.

Finally, I have to express my gratitude to my family who has been supportive in many ways during my life abroad: thank you for everything.

Paulius Stakėnas
