You will be contacted as soon as possible.
This thesis was prepared at the Municipal Health Service Kennemerland, Haarlem, the Netherlands.

The research was supported by grants of the Haarlem Tuberculosis Fund and the Public Health Foundation (Fonds ogz).

The printing of the thesis was financially supported by the Public Health Foundation (Fonds ogz), Oxiod BV and Clindia Benelux BV.

This thesis is printed according to the “Cradle to Cradle” design principles: “How do we love all the children of all species for all time? The goal is a delightfully diverse, safe, healthy and just world, with clean air, water, soil and power – economically, equitably, ecologically and elegantly enjoyed”, by McDonough Braungart Design Chemistry (www.mbd.com and also www.whykiki.nl). The thesis is printed on water-proof plastic with non-toxic washable inks so that it can last for centuries or more appropriately, it can be washed, melted and re-used for any new publication.

Dr. J.M. Prins
Dr. J.E.P. Schellekens
Prof. dr. P. Speelman
Dr. J. van Steenbergen

Faculteit Geneeskunde
“Epidemic fever is caused by the air. Because all men inhale the same wind, when the air is infected with such pollutions that are hostile to the human race, the men fall sick.”

Hippocrates, Breaths xi
