You will be contacted as soon as possible.
Contents

1 Introduction ............................... 1
   1.1 Protoplanetary disks around young stars ................................................. 2
   1.2 Extrasolar planets and their atmospheres ................................................. 10
   1.3 High-contrast observations ................................................................. 15
   1.4 Radiative transfer simulations ............................................................ 21
   1.5 Outline of this thesis ................................................................. 25

2 Polarized scattered light from self-luminous exoplanets ......................... 29
   2.1 Introduction ................................................................. 31
   2.2 ARTES: 3D scattering radiative transfer .................................................. 33
   2.3 Self-luminous gas giant exoplanets ......................................................... 41
   2.4 Discussion and conclusions ................................................................. 52
   2.A Benchmark results ................................................................. 58
   2.B Atmospheric model spectra ................................................................. 62
   2.C Horizontal radiation transport ........................................................... 64

3 Scattered light mapping of protoplanetary disks ....................................... 67
   3.1 Introduction ................................................................. 69
   3.2 Mapping of scattered light images ......................................................... 70
   3.3 New view on the HD 100546 disk surface ............................................... 72
   3.4 Discussion ................................................................. 77
   3.5 Conclusions ................................................................. 79

4 Shadows cast on the transition disk of HD 135344B ............................... 81
   4.1 Introduction ................................................................. 83
   4.2 Observations and data reduction ......................................................... 85
   4.3 Results ................................................................. 89
   4.4 Modeling ................................................................. 100
   4.5 Discussion ................................................................. 107
   4.6 Conclusions ................................................................. 111
