Contents

1 Introduction ................................................. 1
   1.1 Protoplanetary disks around young stars ............... 2
   1.2 Extrasolar planets and their atmospheres .......... 10
   1.3 High-contrast observations ......................... 15
   1.4 Radiative transfer simulations ..................... 21
   1.5 Outline of this thesis ............................... 25

2 Polarized scattered light from self-luminous exoplanets .... 29
   2.1 Introduction ............................................ 31
   2.2 ARTES: 3D scattering radiative transfer ............ 33
   2.3 Self-luminous gas giant exoplanets .................. 41
   2.4 Discussion and conclusions ......................... 52
   2.A Benchmark results .................................. 58
   2.B Atmospheric model spectra .......................... 62
   2.C Horizontal radiation transport ..................... 64

3 Scattered light mapping of protoplanetary disks ............ 67
   3.1 Introduction ............................................ 69
   3.2 Mapping of scattered light images ................... 70
   3.3 New view on the HD 100546 disk surface .......... 72
   3.4 Discussion ............................................. 77
   3.5 Conclusions ............................................ 79

4 Shadows cast on the transition disk of HD 135344B ........ 81
   4.1 Introduction ............................................ 83
   4.2 Observations and data reduction ..................... 85
   4.3 Results ................................................. 89
   4.4 Modeling ............................................... 100
   4.5 Discussion ............................................ 107
   4.6 Conclusions ............................................ 111
