Acknowledgements

I would like to express my sincere gratitude to all the people that contributed directly or indirectly to the development of this thesis.

I would like to thank my promoter Prof. Ameen Abu-Hanna for the opportunity to join this interesting research project and for his guidance during my PhD research. Despite being a very busy scientist he would always find the time for this project, his door was always open when having questions or seeking advice. Our meetings went beyond discussing project planning and updates, our conversations were always inspiring and rich in brilliant ideas. Thank you for your feedback and useful suggestions on the writing of this thesis. Thank you for encouraging and motivating me, and thank you for your patience and for believing in a successful outcome of my PhD.

I would also like to express my gratitude to my promoter Prof. Arie Hasman with whom I had the pleasure to collaborate. Arie’s vast expertise and experience in the Medical Informatics field were very valuable for my PhD.

My thanks also go to my co-promotor Niels Peek, whose efforts had significantly contributed to the scientific strength of this work and to the quality of this dissertation.

I would also like to thank all of the members of my doctoral committee, Dr. Nicolette de Keizer and Professors Evert de Jonge, Arno Sibes, and Koos Zwinderman for accepting the invitation for assessing my work and for approving it. My thanks also go to all my co-authors for our fruitful collaboration.

This work would not have been possible without the Intensive Care Unit data made available to us by Robert-Jan Bosman, intensivist at OLVG teaching hospital in Amsterdam.
I would also like to acknowledge Robert-Jan’s contribution to my better understanding of the problem motivating this research and its implications in ICU.

I am particularly grateful to Prof. Evert de Jonge who was involved in the clinical aspects of our research, providing feedback and helping identify challenges from the clinician’s perspective. For his advice on the data mining part of this work I am thankful to Prof. Arno Siebes. I am also thankful to Prof. Koos Zwinderman for clarifying important aspects related to the statistical analysis used in this research.

I would like to express my special thanks to Lilian Minne for our good collaboration resulting in interesting scientific findings.

I would like to transmit my thanks and appreciation to all the members of the Medical Informatics Department (KIK) from the Academic Medical Center Amsterdam who, during my PhD years, actively contributed to my development as a scientist.

Although words are not enough, I would like to express my sincere love and gratitude to my wonderful wife, Fabiana. She constantly motivates me with her many qualities, like perseverance, commitment, and discipline, that she has put to use so well during her PhD. More than that, Fabiana is for me an extraordinary example of life that taught me the full value of family and friendship. Fabiana, thank you for coming into my life, for your love, and for making me happy! And then, there is my son Marco, my little wonder. If I could reach into my soul and gather all my love, joy and pride and give it a shape and name that would be a boy called Marco. Thank you for everything you are and that you came to us, your papa and mama!

And to my parents, my father Ioan and my mother Maria: dragi părinţi, vreau să vă mulţumesc din suflet pentru toate câte aţi făcut pentru mine şi pentru câ aţi făcut totul pentru mine. Contemplând viaţa mea până acum, vă văd întotdeauna veghind alerţi, fericit pentru bucuriile mele si mâhniţii de ale mele tristeţii. Voi sunteţi fundaţia pe care m-am clădit eu ca om, prin educaţia dată, prin iubirea şi grijă ce mi-o purtaţi. Pentru aceasta, tată si mamă, aveţi dragostea mea necondiţionată şi sper că sunteţi mândrii de mine.
I would like to extend my special thanks to Radu Șerban, my paronymph, for his friendship and support. I hope we will now have time to work on our great ideas.

My gratefulness also goes to all my friends for believing in me, supporting me, and sharing the fun moments of life.
