Acknowledgements

The time has finally come to finish this thesis, but before I do so I would like to say thank you to everyone who contributed to the result that lies before you. Over the time of my thesis research I came to meet and work together with many people. I owe them my gratitude for the great collaboration and the good times in Amsterdam during my PhD research.

First of all I would like to thank Peter, my promotor, for his trust and support that have made it possible to perform and complete this work. The way that you convey your enthusiasm and engage people with analytical chemistry got me interested to continue in this field (starting back in the first year at university for both of us, 1999, Algemene Chemie). After various projects and courses in the analytical-chemistry group and Shell both of us were convinced that a PhD-project was the way to move forward. Jan Blomberg deserves a fair share in the credit here as well! I would like to mention the many possibilities people get in the group to visit meetings, conferences and even help organize them. They have been the best times and created a wealth of personal development opportunities. Thank you for always being ready to join singing good-old Dutch songs on Friday evenings. You once accused me in York of comprehensive waste of time, but this wasn’t one of them.

Special thanks go out to members of the thesis committee: Sjoerd van der Wal, Hans-Gerd Janssen, Alex van Herk, Wim Kok, Wolfgang Radke and Freddy van Damme. I appreciate our discussions and the critical question with respect to the various subjects of this thesis. Without your challenging this thesis could not have reached the level it has now. I also appreciate the possibilities of visiting the DKI in Darmstadt (Wolfgang Radke, Harald Pasch, Tibor Macko, Mubasher Bashir, Yonggang Liu and others, thank you for your hospitality), DSM in Geleen, and Unilever in Vlaardingen (ice cream!).

Colleagues and friends of the analytical-chemistry group at University of Amsterdam – the list has grown long after being around for almost seven years! Fiona Fitzpatrick and Aschwin van der Horst, thank you for giving me the chance to work with liquid chromatography and SEC for the first times during the bachelor internships. Simona Popovici, I’m happy that we meet again in our new roles now you’re teaching at
Hogeschool Zeeland. I like the student visits to Dow, you’re welcome. Xulin, Maya Ziari, Wybren Frankema (I still don’t say RMS-radius, though you are right), thank you for sharing the office space at the fourth floor of Roeterseiland when I just joined the group. Many other colleagues there I would like to thank for the work we did and good times we had. Yuli, Filippo (I will remember you surrounded by a canteen full of girls only in Groningen), Mauro (you should have been there), Erwin (has similar problems with English women when dressed in purple), Sonja (outclasses all of them together), Peter Pruim & Stella (I’d better make sure the fridge is full when you are there, I appreciate your attendance on Friday afternoons), Linda, Elena (thank you for the royal banquet upon your arrival), Aleksandra and Daniela. Sebastiaan Eeltink, thank you not only for teaching me how to make monoliths and guiding me in doing PhD research when I just started, but also for being a good friend (especially when you let me win with squash…). HPLC2006 San Francisco was one of the best symposium visits, because of the associated holidays. Gabriel (thank you for supporting the group with chemometrics expertise), Sonja and Frederique; thank you for joining the road trips around SF and being part of this adventure. Wim Decrop, I’ve learned a great deal from you with respect to two-dimensional liquid chromatography and data processing in Matlab. Other things that come to mind are the tree W’s: waffles, Westvleteren and DJs Wipneus & Pim. Dominique and Korneel (he can open a beer with anything, included a printed version of J Chromatogr A.), I’m grateful for the work you did on making monolithic and particle-packed columns. Apart from that there were the barbeques, wok-frituren; we had a lot of fun as well. When their project was finished Siri took over making monoliths. No wonder you are doing a PhD now in Switzerland, within a few weeks we did some of the best experiments ever with monoliths. Then there are Petra (jij regelde de hulptroepen bij symposia en activiteiten, ook als de Jenever op moest), Tom and Peter Verschuren. Thank you for making the group successful as it is. Marjo, your help with the porosimetry has been most valuable to this work, thank you! To all of you, it has been my pleasure to run the FBI for so long. I enjoyed many Friday-afternoon events with you of the Friday beer initiative. After the department had fallen short of a crazy woman to serve coffee I was happy to jump in and set something up for that as well. It’s less flattering than the previous initiative, but having access to descent coffee at work is priceless.
I’ve met many great people that I would like to mention that are active on the subject of polymers through collaboration in the European Graduate School (Thank you Wibke Dempwolf and Alex for your efforts to make EGS possible). Ellen Donkers, Patricia Geelen, Joris Salari, Marie-Claire Hermant, Roxana Abu, Joost Leswin, Bas Staal, Maarten Staal, thank you for the nice times (EGS and not to forget Lunteren) and collaboration. Thanks to Phillip Vana and Daniel Boschmann (Göttingen) for collaboration on synthesis and analysis of star polymers as part of EGS as well. Eindhoven is home also to the Dutch Polymer Institute that has made project CoBra possible. Through the update meetings I’ve met great collaborators within the Dutch Polymer Institute. Joachim Loos and Kangbo Lu, thank you for providing the cryo-TEM results and 3D mapping of monolith structure. Rob Duchateau, Wouter Gerritsen, I appreciate the knowledge we shared on the high-temperature SEC for high-throughput polymer synthesis.

Also I would like to acknowledge my colleagues and friends at Dow that I’ve interacted with during and after my time at University. Freddy, Edwin and David, thank you for making this possible, as well as for the regular contact on results and progress of this project. I am most grateful for the possibilities you offered me to visit Dow in Terneuzen and Midland where we worked on high-temperature 2D-LC. David Meunier, I really appreciate the time you made available for me during the longer visit to Midland – not only at work, but also for visiting the Loons games, traveling for football through most of Michigan. Ted Stokich, thank you for the work on 2D-LC we did. I appreciated the confrontation with my own culture (the Holland visit) and having shooting classes as well. Credit for visiting Holland goes to Pat Smith as well. Pat is a great person, he helped me with the essentials: a bicycle, good coffee (we grind beans) and a trip to a microbrewery once in a while. Most of all thank you for your contribution to great science in making new analytical techniques possible. Dave Walter, I appreciate the concept lunch meeting as well as moose-burger. I remember you as an engaged project leader and great people leader. The return favor of showing you the analytical department and the rest of Amsterdam was therefore more than deserved. In the post-university time I’ve learned from a number of people about how we do characterization of (branched) polymers: Jaap den Doelder, Sjoerd de Vries, Marc Mangnus, Hans de Jonge; I would like to thank you for your time and the contributions to this thesis.
Albena Lederer, Marion Gaborieu, Patrice Castignolles, Bob Gilbert, Walther Burchard and Wolfgang Radke; thank you for organizing the stimulating workshop on characterization of branched polymers in Dresden. I have learned a lot at this meeting about things I did not know. Thanks Anna, Susanne and Michael for your contributions as well, I will try and get you a version of this thesis.

Various others have contributed to project Cobra. Christine Fernyhough from the University of Sheffield. Thank you for making comb polymers available early in my project! Another contact established at the ISPAC 2005 meeting was with Polymer Laboratories. Adrian Williams, Steve O’Donohue and Greg Saunders. Thank you for providing us with the second-dimension SEC columns. Many thousands of second-dimension chromatograms have been analyzed on rock-solid columns that lasted the entire project! Through collaboration between PL and Micronit it was possible to work with a chip-sized viscometer. Marco Blom is gratefully acknowledged for the support with this apparatus. We got it to work properly pretty soon as you can see in the introduction. Small things can have huge impact, as proven again by Ben Klein Meulekamp from our mechanical workshop. Thanks to the disks provided by you we were able to make monoliths in wide-bore steel columns successfully. Acknowledgements also to Johan Scholtens (Shimadzu, LC-equipment) and Jeroen de Jong (Interscience, empty column hardware) for their engagement with this work and going the extra mile to get us the tools to make this work possible.

It’s time to finish. I would like to thank my parents, Ton en Ria, for their support. After you pushed me to finish up the last corrections of the manuscript I can go on a nice holiday with the writing finished. Khanh, you’ve permitted me the time to complete this work. Good life balance is important and you helped me to relax from time to time. When you were not around I was able to work twice as hard and fill my micro-pauses with improving my Gangnam-style dance. Time to show you the result, the plane is here now for my flight to Hanoi.
