It’s a bit more than four years and three months ago that I came to the Netherlands to start my PhD at the University of Amsterdam. Initially, four years sounded like a long time, but this time passed so quickly and now suddenly it is over. During this time I met many people, and without some of them this thesis could not have been completed.

I am especially grateful to my Co-promotor and daily supervisor Frans, who guided me from my first day in Amsterdam (I arrived very late at the airport and you picked me up) till now. You taught me a lot about fungal biology and the wall proteome of C. albicans, but most importantly you shared with me your passion for science. This passion was truly encouraging and contagious. Whenever I had any question you answered it – either by already knowing it or by mulling over it until you finally found it. Without you this thesis would not exist. Many, many thanks!

I would also like to express my deepest gratitude to my two Promotors Stanley and Chris. Thanks for taking me up in your groups and making my work at the UvA even possible. I could always count on your support, either when it came to improving a manuscript, when you gave useful suggestions about ongoing research or – especially now at the end of my PhD - to overcome the hurdles of never ending bureaucracy. Of course also many thanks to my second Co-promotor Leo, for taming the FTMS and for the engagement in my research. You were always ready to help and your constructive comments were indispensable for completing this thesis.

I would like to take the opportunity to thank the European Union for funding the FINSysB network, and especially Al Brown for organizing it. I enjoyed our meetings a lot! I met many great people during that time – thanks to all of you.

I would also like to thank Prof. Dr. Pedro Crous, Prof. Dr. Joachim Ernst, Prof. Dr. Joost Teixeira de Mattos, Prof. Dr. Han Wöstien, Dr. Christophe d’Enfert, and Dr. Piet de Groot for accepting being members of my PhD committee and investing their precious time in the scientific examination of my thesis.

I also must not forget to acknowledge Dennis for taking care of so many things...

in the lab and the secretaries of SILS, Ans, Bondien, and Maartje for their kind help.

Furthermore I would like to thank all the former and present members of the Molecular Biology and Microbial Food Safety group, the group of Mass Spectrometry of Biomacromolecules and the Molecular Microbial Physiology group for all the help and for creating a very pleasant working environment. I would like to acknowledge Gertien, Yelena, Benno, Hans, Jan, and Luitzen for all the useful comments at our workdiscussions. Furthermore I also have to thank Henk and Winfried for their help with all the problems concerning mass spectrometry. Thanks to you visiting your floor was always very enjoyable. And I also have to thank Grazyna, my predecessor, for helping me the first days in the lab and for introducing me to the work with Candida.

Of course I also want to thank my bachelor and master students Duco, Evita, Jens, and Sepehr for joining my research and being a big help in the lab. I enjoyed working with you.

Clemens, as my one and only colleague working with C. albicans you deserve my special thanks. Over the past four years we shared a lot together, be it in the lab, on conferences or outside the university. I enjoyed working with you. I think we made an excellent team.

Starting a life in a new country can be a bit difficult. But thanks to some great people I immediately felt welcome in Amsterdam. Especially memorable are the many evenings with a beer or two in Kriterion. Gertjan, Marcela, Ronald, Merel, Kornel, Michael, Patrick, Bart, Isil, Andrew, and Katy I will never forget these evenings. Well, what used to be Kriterion is now Polder, but many of the people are still the same.

The sophisticated conversations we had during lunch and coffee break deserve to be acknowledged as well. Thank you dear members of the lunch group - (initially Kornel), now Alexandra, Clemens, Jeroen, Marijke, Nadine, Orawan, and Philipp - for this daily entertainment, which I will really miss.
Acknowledgements

Orawan, Nadine and Adriana, thanks for the wonderful dinners we cooked together. To make it short: I am really lucky to have you as friends and truly value the time we spent together.

I also have to mention my office mate Azmat, who just finished his PhD and went back to Pakistan. I truly value the many discussions we had (often together with Nadine) about science, how amazing yeast is, life and everything. I also appreciate your extensive computer knowledge, which you always shared very willingly.

Bea und Sandra, bei euch muss ich mich ja auch bedanken. Wir haben uns im Holländischkurs kennengelernt. Obwohl das Holländisch leider nicht so gefruchtet hat (außer bei Bea), wurde dafür umso mehr aus unserer Freundschaft. Unsere Treffen waren immer sehr gemütlich, ob irgendwo zum Abendessen, zu selbstgemachten Spätzle, oder Glühwein.

Ich will mich auch für langjährige Freundschaften bedanken, speziell bei Julia, Katrin, Maria, Silvia und Gini.
