CONTENTS

I. General introduction 7

II. The incidence, etiology and outcome of acute seizures in children admitted to a rural Kenyan district hospital 17
   Submitted.

III. Haptoglobin HP2-2 genotype, α-thalassaemia and acute seizures in children living in a malaria endemic area of Kenya 35
   Submitted.

IV. Burden, features and outcome of neurological involvement in acute falciparum malaria in Kenyan children 45
   JAMA, 2007; 297 (20): 2232 – 40

V. Decorticate, decerebrate and opisthotonic posturing and seizures in Kenyan children with cerebral malaria 63
   Malaria Journal, 2005 Dec 7; 4: 57

VI. Continuous electroencephalographic monitoring and seizures in children with cerebral malaria 81

VII. Pathogenesis, clinical features and neurological outcome of cerebral malaria 101
   Idro R, Jenkins NE, Newton CJRC

VIII. Risk factors for persisting neurological and cognitive impairments following cerebral malaria 133
   Idro R, Carter JA, Fegan G, Neville BGR, Newton CRJC
   Arch Dis of Childhood, 2006; 91 (2): 142-48

IX. Axonal and astrocyte injury markers in the cerebrospinal fluid of Kenyan children with severe malaria 149
    Medana I, Idro R, Newton CJRC
    Journal of the Neurological Sciences, 2007; 258 (1-2): 93-8
X. High plasma levels of erythropoietin are associated with protection against neurological sequelae in African children with cerebral malaria.

Submitted.
