ACKNOWLEDGMENTS

I am extremely grateful to Prof Charles Newton, my supervisor and mentor, who initiated these projects and through him, the Wellcome Trust. His fellowship from the Trust funded most of my training and the studies in this thesis. His insight, availability, generosity and commitment have been total. Through his efforts, I have not only been able to undertake this PhD but was also able to start training in Paediatric Neurology. I am also very grateful to my other two supervisors; Prof Brian Neville and Prof Piet Kager whose insight into the pathogenesis of disease and using data to understand it and the speed and detail with which they have helped improve my drafts has been amazing. Prof Kager has also had to take on all the administrative challenges of the PhD. To you all, I say thank you very much.

I would like to thank the Kenya Medical Research Institute and the Wellcome Trust Collaborative Research Programme in Kenya for providing me with the opportunity to undertake this PhD. In particular, I am grateful to the Centre Director Dr Norbert Peshu, the Scientific Director Prof Kevin Marsh and the clinical, scientific, administrative and support staff in the Centre for Geographic Medicine Research for making me feel so welcome and at home in Kenya. Kilifi has been a wonderful place and time well spent. I want to particularly thank the children and the parents/guardians who took part in these studies. May the souls of those who died rest in peace. In addition, I am grateful to the Director, Mulago Hospital, Uganda and the Head, Department of Paediatrics for giving me time off to undertake this work. I would also like to thank the International Brain Research Organization that provided me with travel fellowships to attend specialized “IBRO Schools” and present some of this work.

Apart from my supervisors, there are other people who worked hard to bring this work to what it is today. Chief among them is Dr Samson Gwer who spent many sleepless nights hooking up patients on monitors, dopplers and following them up, keeping so many records and fighting with machine failures together with Godfrey Otieno and Edwin Chengo. In the labs, Dr Thomas Williams and his team, Sophie Uyoga and Alex Macharia; Robert Mwakesi, Barnes Kitsao, Oscar Kai and Nimmo Gicheru; in the wards Anderson Kahindi, Mwanamvua Boga, Siti Ndaa, Mercy Mwaboza, Sidi Kazungu, Esther Kivaya, Japhet Karisa and the rest of the nursing team in KEMRI Ward; the fieldworkers both in KEMRI Ward and in Ward one; the Social and Behavioural team and the assessment centre team led by Judy Tumaini and Ken Rimba; the records staff Ramos and Josephine Kazungu who spent hundreds of hours storing and retrieving files; the data management team Tony Kazungu, Michael Kahindi and Rachael Odhiambo; and the men and women who deal with numbers Greg Fegan, Hellen Gatakaa, Benedict Orindi and Lazarus.
Mramba. Prof Kevin Marsh was insightful in his talks to PhD students while Dr Steve White of the Department of Neurophysiology, Great Ormond Street Hospital for Sick Children, was instrumental in teaching me the fundamentals of EEG.

I shared many moments with colleagues Drs Sadik Mithwani and Kathryn Maitland, my fellow PhD students in particular, Michael Kihara, Cleopatra Mugyenyi, Simon Muchohi and Rachael Opiyo, medical Officers, Moses Ndiritu, Ismail Ahmed, James Ignas, Samuel Aketch, Michael Mwaniki and Mohammed Shebbe, my office mates Faith, Margaret and Vandana, Reuben Orwaru and many friends with whom we watched football, got thrilled as we won and agonized when we lost matches and, the community of St Patrick’s Catholic Church, Kilifi.

I want to thank my wife Catherine for standing in for me and playing daddy’s role when our children Ignatius, Philomena, Priscilla and Victoria could not understand where daddy was, for bearing my absence with them even during the very difficult events at home and supporting me through the four years.

Lastly to HIM who never fails and is more than able to accomplish in us more than we can ever think, I am very grateful.
