# Table of contents

## Chapter 1

1 General introduction 9

## Chapter 2

Assays to discriminate between LGV- and non-LGV-inducing *Chlamydia trachomatis* strains

2.1 Comparison of three genotyping methods to identify *Chlamydia trachomatis* genotypes in positive men and women
*Mol Cell Probes.* 2010; 24: 266-70

2.2 Anal infections with concomitant *Chlamydia trachomatis* genotypes among men who have sex with men in Amsterdam, the Netherlands
*BMC Infect Dis.* 2011; 11: 63

## Chapter 3

Evaluation of high-resolution typing methods for *Chlamydia trachomatis*

3.1 Evaluation of high-resolution typing methods for *Chlamydia trachomatis* in samples from heterosexual couples

## Chapter 4

*Chlamydia trachomatis* infections in relation to sexual orientation

4.1 Distinct transmission networks of *Chlamydia trachomatis* in men who have sex with men and heterosexual adults in Amsterdam, the Netherlands
*PLoS One.* 2013; 8: e53869

4.2 *Chlamydia trachomatis* strains show specific clustering for men who have sex with men compared to heterosexual populations

94
in Sweden, the Netherlands, and the United States

4.3 Multilocus sequence typing of *Chlamydia trachomatis* among men who have sex with men reveals co-circulating strains not associated with specific subpopulations

J Infect Dis. 2013; 208: 969-77

Chapter 5

*Chlamydia trachomatis* infections in relation to ethnicity and geography

5.1 Distinct distribution of *Chlamydia trachomatis* genotypes in Paramaribo, Suriname and Amsterdam, the Netherlands

5.2 Urogenital *Chlamydia trachomatis* infections among ethnic groups in Paramaribo, Suriname; determinants and ethnic sexual mixing patterns

5.3 High resolution typing reveals distinct *Chlamydia trachomatis* strains in an at-risk population in Nanjing, China

Chapter 6

6 General discussion
