The work described in this thesis is the result of many years of work in the field of DBS, and of my growing interest and passion for this field starting back in far 1998. DBS is by definition a multidisciplinary technique and this thesis would not have been possible without the support of many colleagues and friends, to whom I am indebted.

First of all, I’d like to thank my two promotores.
Prof. dr Marina de Koning-Tijssen. Dear Marina, my first official project at the AMC was under your supervision. Many other small and big projects have followed. In many occasions I have profited from your ability to quickly get a lucid overview in every subject and to give practical advices on all topics, but even more, I appreciated your friendly attitude. I have enjoyed a lot working with you in these years: we all miss you since you left to the far cold North. I do hope that we will continue to enjoy fruitful collaborations in the future.

Prof. Dr. Ivo van Schaik. Dear Ivo, I appreciate a lot all the work you did for this thesis, your dedication and precision, and your support and encouragement. You impressed me for your ability to keep everything under control.

I’m also indebted to my “first-timer co-promotores team”. I am very proud to be the first PhD student of you all!
Dr Fleur van Rootselaar. Dear Fleur, we have completed together a complex research project: you helped me to overcome doubts and disappointment and, thanks to that, we accomplished nice results. I’m grateful for your friendship. Due to our busy schedules, it’s difficult to see each other sometimes, even if our rooms at the AMC are so close, but we always manage to do it. Thanks also for your support with all the practical issues related to the rules and habits of living in The Netherlands!

Dr. Rick Schuurman. Dear Rick, in my view you have all the qualities of the perfect neurosurgeon: the ability to make quick decisions, to go straight to the point, to concentrate on the essential by ignoring superfluous details, to keep the calm in any circumstance. All of these were very useful for the many surgeries we did together, and also for the research projects.

Dr Rob de Bie. Dear Rob, thank you for having given me the possibility to carry out my research projects and to perform all the studies included in this thesis. I’ve learnt a lot from your way of dealing with scientific issues.

I would like to thank all the members of my reading committee for evaluating my thesis and taking part in the PhD defense: Prof. Dr. Andries Bosch, Prof. Dr Michiel Staal, Prof Dr. Bob van Hilten, Prof. Dr. Yasin Temel, Dr. Hans Koelman, Dr. Ir. Aart Nederveen. It is an honor to
have such a large representative of Dutch DBS experts as part of my reading committee. I hope to have the possibility to collaborate with you all (again) in the future.

I am very privileged to have as very special paranimfen two very special persons: Dr. Hans Speelman and Dr. Lo Bour. Both of you played a major role in making my whole stay in the AMC possible. Moreover I benefit a lot from your guidance and friendship.

Hans: when I decided to move to the Netherlands I looked for a place where DBS was performed and where an active movement disorders group was present. My choice was easy: my first try would be by the “famous Hans Speelman”. Few people know that we had already been coauthors before that time. I’m grateful that you immediately decided to help me finding a position in the AMC. Since our first meeting, I already had the feeling that you were a special person and neurologist. In everything you do the people always come first: patients’ safety and comfort is always the priority, and you always take the needs of everybody into account. Your life policy of “never say no” and never follow the easiest way has often been surprising but also inspiring to me. Needless to say that your role was crucial for many aspects of this thesis: even if you could not be my co-promotor, I’m very happy that you accepted to be my paranimpf. I hope you will always keep (a little part) of your deserved retirement to help us with upcoming research, because we value your input so much.

Dear Lo, you introduced me into the world of neurophysiology and physics and showed me a different way of looking at things, from the technical point of view. Thanks to you I have learnt many things, from wavelets to local field potentials, from the inner secrets of micro-recordings to the basics of Matlab coding. We have always exchanged opinions with respect, even when having different positions. I also enjoy our interesting conversations on your many disparate interests and hobbies and your love for Italy!

Dr. P. van den Munckhof. Dear Pepijn, some of the works included in this thesis were initiated thanks to your curiosity and brilliant ideas and were completed thanks to your dedication. It is always pleasant to discuss with you about everything. You do your work with the uttermost care and always try to learn new things and to find ways of improving. It’s nice that I can always drop by your room to discuss small and big issues. You dedicated your thesis to enthusiasm and this is really the first word that comes to my mind when thinking of you.

Marije Scholten, Gosia Iwan and Miranda Postma: I’m grateful for the crucial contribution that you give to all research projects and especially to the outstanding care you give to our patients.
Acknowledgements

All the members of the AMC DBS group: Dr. Ben Schmand, Dr. Martijn Figee, Vincent Odekerken, Dr. Gert Geurtsen: thanks for useful and inspiring discussions.

The AMC Movement Disorders group, full of enthusiastic and competent people, who live the research and clinical work with joy and energy. I love to exchange opinions with all of you, past and present members: Sarvi Sharifi, Arthur Buijink, Bas Nijmeijer, Rens Verhagen, Justus Groen, Evelien Zoons, Yasmine Dreissen, Joke Dijk, Elisabeth Foncke, Elles Berger-Plantinga, Mignon Gerrits, Richard Beukers, Katja Ritz, Marcel Lourens, Mirte Bakker, Sandra van der Salm, Joost van den Dool, Dan Velsevoer, Constant Verschuur (and anybody I might have forgotten...). I hope our collaborations will grow in the future. Dr. Johan van der Meer: we spent nice time together and shared the exciting last phases of our PhD, with all the ups and downs that research brings along. I hope you will succeed in your new projects in Germany, and... forget about the dustman.

All KNFers and especially Dr Hans Koelman, the enlightened KNF boss who welcomed me in this department and never forgets to knock at my door in the evening. Everybody says that here the atmosphere is very different from the other departments, but one can only understand it when living it from the inside. I could enjoy the friendly and positive attitude of all the people working here: Marijke Dekker-v/d Sloot, Janny Ree, Edwin Blok, Erik Mans, Jose’ Dilai, Marianne de Wrede-Spitteler, Camiel Verhamme, Claudia Jonkhout-Kleijn, Shirley Jarman, Stéphanie Golsteijn, Titia de Klerk, Nettie Georges, Gerard van Bruggen. This is a big family that shares joys and comes together in difficult moments (we will always miss Dwar). In the beginning it was a little surprising for me, but then I’ve learnt an important lesson for life: everything (but really everything) could be a good reason to share a piece of cake and some quality time: birthdays, for sure, but also: somebody starts a fellowship, somebody ends a fellowship, Fleur is pregnant, one paper/grant/poster is accepted, there’s a new resident, a resident is leaving, olieballen by Thijs in December, somebody fixed the date of PhD, the son of Hans passed an exam, Thijs sold/bought his house, Dwar is divorced since 25 years, last patient was included in a trial, Lo published his 70th paper, or just… zomaar, voor de gezelligheid! Thijs: thanks for your precious technical help: your artistic and technical expertise was important for some of my papers and also for the cover of this thesis.

I’m also indebted to all the patients who participated in the research projects and to the colleagues who collaborated in performing the studies and writing the papers included in this thesis: Paul Groot, who provided invaluable help to solve the fMRI issues, Maarten Bot, Mirjam van Tricht, Damiaan Denys, Danielle Cath, Nan van Geloven en Dagmar Verbaan.
I would like to thank also the entire staff and residents of the department of Neurology, Harriet Kuil and all the secretaries, Stefanie de Vries, Marieke Mink and the staff of the klinisch onderzoeksbureau.

All my new colleagues at Haga Ziekenhuis in Den Haag: Arne Mosch, Carel Hofmann, Wim Lelieveld, Bas de Bruijn, Rudolf Keunen, Hille Koppen, Karlijn de Laat, Barry Mook, Denes Tavy, Paul Wirtz, Ard van der Zwart. Working with you is really very pleasant.

Of course I can’t forget the “AMC Italian connection”.
Sabina and Matthew (yes Matthew you are also sort of Italian by now). Thanks for your friendship: it is so nice to have someone to share some words in Italian at the end of the day, while catching the metro around 19.00; Eleonora, Marco, Michele and all the other Italian friends who work or have worked in the AMC during these years: forza ragazzi!

And also Marjo & Theo van Woerkhom, all my invaluable Italian friends in Den Haag, my neighbors “Zorgvlieters” and my best friends in Italy: I’m lucky to have so many nice people around me!

And last but not least my family. Un ringraziamento particolare ai miei genitori, per il loro costante supporto e incoraggiamento, fondamentale per il raggiungimento di questo risultato; a Salvo, Emilia, Alberto e a tutti i componenti della famiglia Bonifati-Contarino in Sicilia e in Calabria, comprese naturalmente le nipotine Lavinia e Anastasia!
Vincenzo: il lavoro di redattore tecnico di questa tesi e di supervisore della logistica rappresenta solo la minima parte del tuo contributo alla riuscita di questo progetto. Tu mi hai attirato in questa nazione, di cui ora sono entusiasta quanto te, e hai così permesso che si aprissero per me nuove prospettive lavorative e di vita. Per questo, e per tutto quello che tu sei e fai, senza di te tutto questo non sarebbe potuto accadere.
