Acknowledgements

In the following paragraphs I wish to express my gratitude to all those who have contributed to this thesis.

First and foremost I would like to thank my co-promoter for many years of guided freedom. Arnoud, your passion for science and attention to detail are contagious. I thank you for the opportunity to do research in your lab and discuss and publish our findings. I hope we will stay in touch beyond my graduation. I am also indebted to Anton Berns for supervising this dissertation and approving its content.

Next, I would like to acknowledge two lab colleagues whose help has been essential to the realization of this thesis. Maaike, your invaluable help with mouse experimentation is as appreciated as your lively and outspoken personality. Pablo, being able to collaborate and discuss science with you meant a lot to me. I will always be deeply grateful to your intellectual and practical contributions to this dissertation.

In addition, I enjoyed collaborating with several other excellent scientists. From the AMC, I would like to mention and thank Jan Weening, Jan Aten, and Nike Claessen as well as Gwen Teske, Anneke Koeman, and Coert Zuurbier for allowing me to utilize their knowledge and expertise in the fields of nephrology and hypertension. From the NKI, I thank Hans and Ji-Ying for electron microscopy and animal pathology. I am also grateful to the managers of the digital microscopy and FACS facilities. Lenny, Lauran, Frank, and Anita; your continuous support allowed me to focus on research. I am also appreciative of the editors and most referees that handled and improved published chapters of this thesis.

I am furthermore thankful for the scientific input of many colleagues of which I would like to highlight Karine, Iman, Erik, Kevin, Johan, Sander, Coert, Mike, and Sandra. You, ladies and gentlemen, bring science alive. From my students I wish to specifically thank Laila, Suzan, and Laura for their curiosity and work.

Meinen Eltern und meiner Schwester danke ich für ihre Unterstützung und ein jederzeit offenens Ohr, um Forschung auch mal außerhalb des Labors zu reflektieren.

Last, I would like to thank my dear wife. Hoa, thank you for sharing your life with me, thank you for knowing when to talk about work and when not to, thank you for two beautiful children who continue to amaze me.
