Contents

1. Introduction ................................................................................................. 1
   1.1 Background of this study ......................................................................... 1
   1.2 Educational goals and research questions ........................................... 7
   1.3 Methodology ........................................................................................... 9
   1.4 Overview of the dissertation .................................................................. 17

2. Towards a learning path on computer modelling ....................................... 21
   2.1 Introduction ........................................................................................... 21
   2.2 Theoretical framework: the modelling process ..................................... 23
   2.3 Research questions ................................................................................ 26
   2.4 Four pilot projects .................................................................................. 27
   2.5 Fourth pilot project: combining video analysis and model-driven animation in the second year of Dutch secondary education .......... 29
   2.6 Conclusions ........................................................................................... 35

3. First version of the modelling learning path ............................................. 39
   3.1 Introduction ........................................................................................... 39
   3.2 Main design principles .......................................................................... 40
   3.3 Design and implementation of the learning path .................................. 43
   3.4 Set up of the classroom experiment on model building ...................... 50
   3.5 Results .................................................................................................... 51
   3.6 Conclusions ........................................................................................... 56

4. Lower secondary students’ use of formulas in computer models ............. 59
   4.1 Introduction ........................................................................................... 59
   4.2 Method ................................................................................................... 61
   4.3 Results .................................................................................................... 65
   4.4 Conclusions, and recommendations for a next round ......................... 68

5. Design of the modelling learning path ..................................................... 71
   5.1 Introduction ........................................................................................... 71
   5.2 Educational goals and research questions ........................................... 73
   5.3 Modelling approach .............................................................................. 74
   5.4 Integration into the physics curriculum ................................................. 77
   5.5 Overall structure and implementation of the learning path ................. 77
   5.6 Description of the learning path in terms of partial learning paths ...... 92
   5.7 Major outcomes and reflection ............................................................. 103
