Acknowledgments

You are now able to read this dissertation thanks to the careful guidance of Ronald de Wolf. In these four years in Amsterdam, I have seen him as a fatherly figure and an excellent teacher of both science and life. He has been especially good in dropping his usual rigorous mathematical approach, and trusting me at the very right moment.

Simone Severini is another person to praise in case you like this thesis. Thanks to him, I discovered my passion for graph theory and for working with a smile. I do not know how many hours I spent with him talking about chromatic numbers and noisy channels (but I can give an upper bound of 35064).

And how can I forget *the quantum killer*, Harry Buhrman? When casually passing by my office, he usually figures out a one-liner that destroys the conjecture written on my board. He is the man who distributes happiness and wisdom at CWI, and one of the best actors I ever directed.

I am grateful to the other members of my PhD committee, Jean-Sébastien Caux, Monique Laurent and Leen Torenvliet, for their enthusiasm and their kind and helpful comments that improved my work. Talking about improvements: a big thanks goes to Emma Cook, Ignacio Cascudo, Christian Schaffner and Teresa Piovesan, who patiently proofread my drafts, and to Berta Cillero and Nadia Sabbetta, who accepted to be at my side during my defense (they know karate). Tom Sterkenburg is the one who wrote my beautiful *samenvatting*, which I then translated to English (or the other way around).

I am immensely indebted to my coauthors and the colleagues who inspired me with beautiful scientific discussions (there are detailed acknowledgments at the beginning and at the end of each chapter). I would also like to mention some other people that are responsible for my love for science, in order of appearance: Walter Cosenza, Carlo Blundo, Roger Penrose, Giuseppe Persiano, Vincenzo Auletta, Fabrizio Illuminati and Andreas Winter.

Finally, I enjoyed working in Amsterdam thanks to the support from my loved one, my family and my friends. Serenity is the best way to be productive!

Giannicola Scarpa
